Hi Bruce,

Based on the project changes outlined in the revised Natural Heritage Assessment & Environmental Impact Study - Windsor Solar Project: Final Submission, dated November 17th, 2014 and the email you have provided (see attached), we agree with your assessment that the proposed minor layout change, requiring some alterations to the panel configuration and location of four MV Stations in the northwest corner of the Project Location to accommodate a request to relocate a piece of air navigation communication equipment, will result in no changes to natural features affected by the project.

Upon review of the modifications outlined in revised Natural Heritage Assessment & Environmental Impact Study - Windsor Solar Project: Final Submission, dated November 17th, MNRF is satisfied that the Natural Heritage Assessment requirements of Ontario Regulation 359/09 have been met for these project changes. Please add this email and the revised Natural Heritage Assessment & Environmental Impact Study - Windsor Solar Project, dated November 17th, 2014 as an addendum to the confirmation letter issued October 31, 2014 for the Windsor Solar Project

Thank you to Ruth for reviewing this addendum.

As noted in my attached email, this addendum was not submitted in the format we had requested. We request addendum and amendment information to be submitted in a particular format because it allows us to spend less time searching through reports and more time on conducting our review. It also results in less confusion for all parties, and in records retention, when we only have one final version of the NHA report with addendums/amendments appended, as opposed to submitting a revised NHA report after we have already issued a confirmation.

Thank you for your understanding.

Clairissa
