Appendix F: Notice of REA Amendment

1 Introduction

On April 2, 2014, Kingston Solar GP Inc., operating as the general partner of Kingston Solar LP (KSLP) was issued a Renewable Energy Approval (REA) [**REA#: 1016-97YHC7**] to develop and operate a 100-megawatt (MWac) ground-mount solar photovoltaic (PV) project to be known as the Sol-Luce Kingston Solar PV Energy Project (see **Appendix A**).

The Project, called the Sol-Luce Kingston Solar PV Energy Project, is generally bounded by Highway 38 to the east, Mud Lake Road/County Road 19 to the west, Quabbin Road to the north, and Highway 401 to the south. The proposed project falls within two municipalities: the City of Kingston to the east and Loyalist Township to the west. The Project will consist of solar modules, inverters, step-up transformers, electrical collector lines, a transformer substation, DSTATCOM, neutral ground reactor and fixed reactor banks, transmission line access roads and construction staging areas.

Kingston Solar LP is seeking a technical change amendment to the REA issued for the Sol-Luce Kingston Solar PV Energy Project (REA # 1016-97YHC7). This amendment is for technical changes (as described below) that have been required by the Independent Electricity System Operator (IESO) and Hydro One Networks Inc. (HONI). The proposed changes also reflect the final design of the facility. The changes include the addition of two (2) DSTATCOM units (a 10 MVAR and a 8.75 MVAR) with fixed reactor banks (FRB) and addition of a Neutral Grounding Reactor (NGR), inclusion of manufacturer-specified transformer noise data, and a reduction in the number of Medium Voltage Power Platforms (MVPPs) from 78 to 66, resulting in a smaller project footprint. For clarity, all components remain within the approved project location boundary. This report outlines the proposed amendments and any potential impacts that may be anticipated to the natural environment and neighbouring landowners.

To avoid confusion, this report focuses on the final design as prepared by H.B. White Canada Corporation (H.B. White). To review the preliminary design as submitted to the MOECC as part of the REA application, please visit the project website at: http://www.samsungrenewableenergy.ca/kingston.

2 Overview of the Minor Amendment

The basis for this technical change amendment is the addition of new electrical equipment, consisting of two (2) DSTATCOM units with fixed reactor banks and one (1) Neutral Grounding Reactor (NGR) as required based on consultation with IESO and HONI during detailed design. In addition, the number of MVPPs has decreased from 78 to 66, resulting in a decreased project footprint. The locations of the remaining 66 MVPPs remain within 10 m of the coordinates specified in Schedule B of the REA.

The purpose of using the DSTATCOM units with fixed reactor banks is to ensure stability of the Hydro One electric grid by maintaining high MVAR (reactive power) output when system voltages are depressed. The purpose of the NGR is to limit the maximum fault current to a value which will not damage the equipment in the power system.

Through consultation with the MOECC in May 2015, it is expected that the proposed changes described in this Modifications Document represent a reduction in overall environmental effects of the project (see **Appendix C** for agency correspondence). As such, the proposed changes constitute a technical change amendment.

This Modifications Document provides details the following proposed changes:

- Addition of two (2) DSTATCOM units with fixed reactor banks (FRB);
- Addition of a Neutral Grounding Reactor (NGR);
- Manufacturer-specified transformer noise data for the substation transformers
- Reduction in number of previously approved MV stations from 78 to 66 stations resulting in a revised Noise Study Report and Stormwater Management Report;
- Minor changes to the site layout.

3 Proponent Contact Information

In addition to the technical changes outlined above, Kingston Solar LP is also requesting an administrative change to the Project, specifically a change in address for the owner/operator (Kingston Solar LP). The new address is provided in the project contact information, below.

Should there be any questions about these technical changes or the project, please contact:

Full Name of Company:	*Kingston Solar LP*
Address:	*181 University Avenue, Suite 300, Toronto, Ontario M5H 3M7*
Telephone:	*416-975-8800 Ext. 601*
Fax:	*416-975-8900*
Prime Contact:	*Mr. David Oxtoby*
Email:	*doxtoby@carbonfree.com*

4 Project Size and Layout

The nameplate capacity of the project as outlined in the REA application has been maintained at 100 MW alternating current (AC). The Project will consist of approximately 465,000 solar photovoltaic (PV) modules. Solar PV panels (approximately 300 watts each) will be mounted on the racks and the panels and racks will be aligned in rows. In addition to the modules, MVPPs, a main substation, and underground cabling will be installed to convert DC to AC current and boost the voltage for connection to the grid. To accommodate modifications incorporated as part of this technical change amendment, minor changes to the site layout will be required. The number of MVPPs has been reduced from 78 to 66 to reflect the final design parameters for a total nameplate capacity of 100 MW AC. The original REA application included design parameters which accommodated an overbuild for a total capacity of approximately 120 MW AC. These changes are expected to reduce the overall environmental impact of the project. A comparison figure showing the previously approved layout and the revised layout is provided in **Appendix B**.

5 Ministry of Natural Resources and Forestry

Further consultation with the Ministry of Natural Resources and Forestry (MNRF) was not warranted for the proposed technical changes. As the final design for the project does has a smaller footprint and not exceed the original project location boundary, no amendments to the Natural Heritage Assessment are required. However, the MNRF has been circulated as part of the stakeholder notification process. Any correspondence received in response from the MNRF will be subsequently forwarded to the MOECC.

6 Ministry of Tourism, Culture and Sport

Similar to the above, the technical changes described in this report do not require amendments to either the Cultural Heritage or Archaeological Assessments completed and reviewed by the Ministry of Tourism, Culture and Sport (MTCS). The project location did not increase and the project area was studied and commented on in the original REA submission. Minor changes in the location of project components, installation methods or equipment specifications will not change the results of information presented in relation to cultural heritage or archaeological resources for this project. The MTCS has been circulated as part of the stakeholder consultation that there are proposed technical change amendments to this project. Any correspondence received from the MTCS will subsequently be forwarded to the MOECC.

7 DSTATCOM Inverter System

The proposed modifications to the Sol-Luce Kingston Solar PV Energy Project will include the addition of two (2) Distributed STATic COMpensator (DSTATCOM) inverter systems with fixed reactor banks (FRBs), which will maintain high mVAR output at depressed system voltages. Since the DSTATCOM can maintain constant current over its operating voltage range, the mVAR output of the system is linearly proportional to the system voltage. The DSTATCOM also has a short-term transient current rating, which allows it to provide even more mVAR to assist in the recovery of depressed voltages.

One of the DSTATCOM inverter systems includes eight (8) inverters and the other one includes seven (7) inverters, all of which are mounted in a self-standing frame and are enclosed in steel containers (DSTATCOM container). There are also four (4) transformers. Each inverter has its own controls, circuit breaker and a small AC filter used to eliminate any high-frequency harmonic voltages in the output of the pulse-width modulation (PWM) waveform coming from

the inverter. Each inverter is connected to a 2.5 MVA pad-mounted transformer (a total of four transformers per DSTATCOM inverter system). For this project, the DSTATCOM units will have a total rating of 18.75 MVAR (one unit at 10 MVAR and another at 8.75 MVAR).

8 Neutral Grounding Reactor (NGR)

The single NGR added to the component layout will form an inductive element in the electrical circuit of the project. Due to natural behavior of an inductor, NGRs are used for limiting the maximum fault current to a value which will not damage the equipment in the power system, yet allow sufficient flow of fault current to operate protective relays to clear the fault. For this project, the NGR consists of a single phase (single coil) reactor that will be mounted near the substation transformer, within the substation yard.

9 Supporting Documentation

9.1 Noise Study Report

The proponent has prepared a revised *Noise Study Report (NSR)* based on the technical changes discussed above. The revised NSR indicates that KSLP will be in compliance with the applicable MOECC noise criteria, provided that the following mitigation measures are implemented:

- Acoustic louvers are installed at thirteen (13) inverter enclosures; and
- A 6m-high "U" shaped barrier wall be installed at the substation transformer. The wall will eliminate the line of sight between the substation transformer and the receptors to the south, southeast and southwest, and will be open to the north. Additional details about the noise barrier wall are presented in Appendix D.

Based on a comparison of the mapping of the 40 dBA threshold, there is no change to the overall noise impact at the receptors. The complete revised *Noise Study Report* is presented in **Appendix D.**

9.2 Stormwater Management Report

The proponent has prepared a revised *Stormwater Management Report* based on the final design of the project and the technical changes discussed in this report. For the purpose of the Stormwater Management Report, the project location was split into 6 zones: Zone 1 and 2 to

the west; Zone 3 in the centre of the site; Zone 4 and 5 in the northeast; and Zone 6 in the southeast portion of the project site.

A variety of methods will be employed to manage runoff on the site. Swales of various will be used to convey stormwater runoff along access roads and through the solar panel racks. Culverts will convey stormwater runoff under site access roads. Rock crossings will be installed to convey stormwater runoff across site access roads in areas where culverts are impractical. Riprap apron flow spreaders will be installed at the outlets of culverts, rock crossings and other areas of concentrated flow in order to help minimize erosion. The 30m setback from adjacent watercourses, wetlands and woodlands will provide a natural buffer between the proposed development and natural features.

Multiple temporary erosion mitigation and sediment control measures are recommended during construction, and include:

- temporary silt fences;
- temporary construction entrance(s) will be installed in all vehicle areas adjacent to paved roads;
- construction will be phased to limit soil exposure time, where possible;
- groundwater encountered during excavation will be diverted to well-vegetated land at least 30m from any sensitive receiving body;
- culverts will be installed during dry conditions, when possible;
- disturbed areas will be stabilized by seeding, mulching or other equivalent measures;
- sediment buildup will be removed and disposed of off-site; and
- inspections will occur on a weekly basis, as well as before and after large precipitation events.

Permanent control measures include the installation of riprap outlet protection on all culverts and rock crossings, flow spreaders where swale flows exit, and stabilization of disturbed areas with gravel or permanent seeding once work is completed. The complete Stormwater Management Report is provided in **Appendix E**.

10 Environmental Effects

There are no additional potential environmental effects resulting from the proposed technical change amendment that were not previously anticipated in the *Project Description Report*, *Design and Operations Report*, *Construction Plan Report, Natural Heritage Assessment, Water Assessment and Water Body Report* or *Decommissioning Plan Report* as submitted as part of the original REA application. Mitigation measures proposed to reduce or eliminate potential negative effects to the natural and human environments are documented in the *Construction Plan Report, Design and Operations Report, Water Assessment and Water Body Report* and *Natural Heritage Assessment Reports* provided with the original application.

11 Amendments to the REA Submission Package (*REA dated April 2, 2014*)

Based on the amended REA submission to the MOECC approved on April 2, 2014, the following table outlines which reports in the submission would be affected by the proposed technical changes. For each proposed change listed in this Modifications Document, associated revisions to the reporting documentation are outlined. Changes to the *Noise Study Report* and *Stormwater Management Report* are addressed in the preceding sections.

Proposed Change	Report	Section Affected
Addition of two (2) DSTATCOM inverter systems	Project Description Report	Section 3.4 (Facility Components); Section 3.4.2 (Ancillary Components)
	Construction Plan Report	Section 3.6 (Installation of Substation including the Operations and Maintenance Building); Section 3.8 (Materials Brought on Site)
	Design and Operations Report	Section 3.3.3 (Substation); Appendix A
	Decommissioning Plan Report	Section 3.3.1 (Above-ground Structure Decommissioning)
Addition of a single Neutral Ground Reactor (NGR)	Project Description Report	Section 3.4 (Facility Components); Section 3.4.2 (Ancillary Components)

Proposed Change	Report	Section Affected
	Construction Plan Report	Section 3.6 (Installation of Substation including the Operations and Maintenance Building); Section 3.8 (Materials Brought on Site)
	Design and Operations Report	Section 3.3.3 (Substation); Appendix A
	Decommissioning Plan Report	Section 3.3.1 (Above-ground Structure Decommissioning)
Reduction in the number of MVPPs from 78 to 66 stations	Project Description Report	Section 4.6.2
	Design and Operations Report	Appendix A
Manufacturer-specified transformer noise data for the substation transformers	Design and Operations Report	Substation Transformer Specification Sheet
Minor changes to the site layout	Project Description Report	Figure 1-2 (Project Location)
	Construction Plan Report	Figure 1-2 (Project Location); Appendix A (Site Layouts)
	Decommissioning Plan Report	Figure 1-2 (Project Location)
	Design and Operations Report	Appendix A (Site Layouts)
	Natural Heritage Assessment/EIS Report	Section 5.1; Figures 1-2a-f (Project Location); Figure 3-3 (Woodlands); Figure 3-4 (Wetlands)

12 Summary

Our view is that the aforementioned amendments to the Sol-Luce Kingston Solar PV Energy Project constitute improvements in operational efficiency which stand to benefit neighbouring residents and the environment. None of the amendments will create any potential negative environmental effects to natural features or neighbouring residents for which mitigation was not already proposed in the original REA submission. A Notice of REA Amendment and covering

letter outlining the proposed changes were distributed to all project stakeholders during the week of June 1, 2015 and published in The Kingston Whig-Standard and The Kingston/Frontenac EMC newspaper during the week of June 1, 2015. A copy of the letter and notice are included in **Appendix F.**

Appendix A: REA #1016-97YHC7

Ontario

Ministry of the Environment
Ministère de l'Environnement

RENEWABLE ENERGY APPROVAL

NUMBER 1016-97YHC7
Issue Date: April 2, 2014

Kingston Solar GP Inc. operating as the general partner of
Kingston Solar LP
55 Standish Court, 9th Floor
Mississauga, Ontario
L5R 4B2

Project Location: Unity Road and Mud Lake Road
North and south of Unity Road and Mud Lake Road
City of Kingston, Loyalist Township, County of Lennox and Addington

You have applied in accordance with Section 47.4 of the Environmental Protection Act for approval to engage in a renewable energy project in respect of a Class 3 solar facility consisting of the following:

-- the construction, installation, operation, use and retiring of a Class 3 solar facility with a total name plate capacity of 100 megawatts (MW).

For the purpose of this renewable energy approval, the following definitions apply:

1. "Acoustic Assessment Report" means the report included in the Application and entitled "KINGSTON SOLAR LP, Sol-Luce Kingston Solar PV Energy Project, REVISED NOISE STUDY REPORT", dated March 19, 2014, prepared by Dillon Consulting, and signed by Amir A. Iravani, Ph.D., Dillon Consulting on March 19, 2014;

2. "Act" means the *Environmental Protection Act* , R.S.O 1990, c.E.19, as amended;

3. "Adverse Effect" has the same meaning as in the Act;

4. "Application" means the application for a Renewable Energy Approval dated September 18, 2012, and signed by Jeong Tack Lee, President, Kingston Solar LP, on behalf of Kingston Solar GP Inc. and all supporting documentation submitted with the application, including amended documentation submitted up to the date this approval is issued;

5. "Approval" means this Renewable Energy Approval issued in accordance with Section 47.4 of the Act, including any schedules to it;

6. "A-weighting" means the frequency weighting characteristic as specified in the International Electrotechnical Commission (IEC) Standard 61672, and intended to approximate the relative sensitivity of the normal human ear to different frequencies (pitches) of sound. It is denoted as "A";

7. "A-weighted Sound Pressure Level" means the Sound Pressure Level modified by application of an A-weighting network. It is measured in decibels, A-weighted, and denoted "dBA";

8. "Class 1 Area" means an area with an acoustical environment typical of a major population centre, where the background sound level is dominated by the activities of people, usually road traffic, often referred to as "urban hum";

9. "Class 2 Area" means an area with an acoustical environment that has qualities representative of both Class 1 and Class 3 Areas:

   (a) sound levels characteristic of Class 1 during daytime (07:00 to 19:00 or to 23:00 hours);

   (b) low evening and night background sound level defined by natural environment and infrequent human activity starting as early as 19:00 hours (19:00 or 23:00 to 07:00 hours);

   (c) no clearly audible sound from stationary sources other than from those under impact assessment.

10. "Class 3 Area" means a rural area with an acoustical environment that is dominated by natural sounds having little or no road traffic, such as the following:

   (a) a small community with less than 1000 population;

   (b) agricultural area;

   (c) a rural recreational area such as a cottage or a resort area; or

   (d) a wilderness area.

11. "Company" means Kingston Solar GP Inc. operating as the general partner of Kingston Solar LP and includes its successors and assignees;

12. "Decibel" means a dimensionless measure of Sound Level or Sound Pressure Level, denoted as dB;

13. "Director" means a person appointed in writing by the Minister of the Environment pursuant to section 5 of the Act as a Director for the purposes of section 47.5 of the Act;

14. "District Manager" means the District Manager of the appropriate local district office of the Ministry where the Facility is geographically located;

15. "Equipment" means the inverters, transformers, and one (1) transformer substation, and associated ancillary equipment identified in this Approval and as further described in the Application, to the extent approved by this Approval;

16. "Equivalent Sound Level" is the value of the constant sound level which would result in exposure to the same total A-weighted energy as would the specified time-varying sound, if the constant sound level persisted over an equal time interval. It is denoted L_{eq} and is measured in dB A-weighting (dBA);

17. "Facility" means the renewable energy generation facility, including the Equipment, as described in this Approval and as further described in the Application, to the extent approved by this Approval;

18. "Ministry" means the ministry of the government of Ontario responsible for the Act and includes all officials, employees or other persons acting on its behalf;

19. "Noise Control Measures" means measures to reduce the noise emissions from the Facility and/or Equipment including, but not limited to, barriers, silencers, acoustical louvres, hoods and acoustical treatment, described in the Acoustic Assessment Report and Schedule C of this Approval;

20. "Noise Receptor" has the same meaning as in O. Reg. 359/09;

21. "O. Reg. 359/09" means Ontario Regulation 359/09 "Renewable Energy Approvals under Part V.0.1 of the Act" made under the Act;

22. "Point of Reception" has the same meaning as in Publication NPC-205 or Publication NPC-232, as applicable, and is subject to the same qualifications described in those documents;

23. "Publication NPC-104" means the Ministry Publication NPC-104, "Sound Level Adjustments", August 1978;

24. "Publication NPC-205" means the Ministry Publication NPC-205, "Sound Level Limits for Stationary Sources in Class 1 & 2 Areas (Urban)", October 1995;

25. "Publication NPC-232" means the Ministry Publication NPC-232, "Sound Level Limits for Stationary Sources in Class 3 Areas (Rural)", October 1995;

26. "Sound Level" means the A-weighted Sound Pressure Level;

27. "Sound Level Limit" is the limiting value described in terms of the one hour A-weighted Equivalent Sound Level L_{eq};

28. "Sound Power Level" means is ten times the logarithm to the base of 10 of the ratio of the sound power (Watts) of a noise source to standard reference power of 10^{-12} Watts;

29. "Sound Pressure" means the instantaneous difference between the actual pressure and the average or barometric pressure at a given location. The unit of measurement is the micro pascal (μPa);

30. "Sound Pressure Level" means twenty times the logarithm to the base 10 of the ratio of the effective pressure (μPa) of a sound to the reference pressure of 20 μPa;

31. "UTM" means Universal Transverse Mercator coordinate system.

You are hereby notified that this approval is issued to you subject to the terms and conditions outlined below:

TERMS AND CONDITIONS

A - GENERAL

A1. The Company shall construct, install, use, operate, maintain and retire the Facility in accordance with the terms and conditions of this Approval and the Application and in accordance with the following schedules attached hereto:

(a) Schedule A - Facility Description
(b) Schedule B - Coordinates of the Equipment and Noise Specifications
(c) Schedule C – Noise Control Measures

A2. Where there is a conflict between a provision of this Approval and any document submitted by the Company, the conditions in this Approval shall take precedence. Where there is a conflict between one or more of the documents submitted by the Company, the document bearing the most recent date shall take precedence.

A3. The Company shall ensure a copy of this Approval is:

(1) accessible, at all times, by Company staff operating the Facility and;

(2) submitted to the clerk of each local municipality and upper-tier municipality in which the Facility is situated.

A4. If the Company has a publicly accessible website, the Company shall ensure that the Approval and the Application are posted on the Company's publicly accessible website within five (5) business days of receiving this Approval.

A5. The Company shall, at least six (6) months prior to the anticipated retirement date of the entire Facility, or part of the Facility, review its Decommissioning Plan Report to ensure that it is still accurate. If the Company determines that the Facility cannot be decommissioned in accordance with the Decommissioning Plan Report, the Company shall provide the Director and District Manager a written description of plans for the decommissioning of the Facility.

A6. The Company shall, at least six (6) months prior to the anticipated retirement date of the entire Facility, or part of the Facility, contact the Ministry responsible for agriculture in Ontario at that time to discuss its plans for the decommissioning of the Facility, and follow any directions provided by that ministry in respect of the Company's plans to restore the project location to its previous agricultural capacity.

A7. The Facility shall be retired in accordance with the Decommissioning Plan Report and any directions provided by the Director or District Manager.

A8. The Company shall provide the District Manager and the Director at least ten (10) days written notice of the following:

(1) the commencement of any construction or installation activities at the project location; and

(2) the commencement of the operation of the Facility.

B - EXPIRY OF APPROVAL

B1. Construction and installation of the Facility must be completed within three (3) years of the later of:

(1) the date this Approval is issued; or

(2) if there is a hearing or other litigation in respect of the issuance of this Approval, the date that this hearing or litigation is disposed of, including all appeals.

B2. This Approval ceases to apply in respect of any portion of the Facility not constructed or installed before the later of the dates identified in Condition B1.

C - NOISE PERFORMANCE LIMITS

C1. The Company shall ensure that:

(1) the Sound Levels from the Equipment, at the Points of Reception identified in the Acoustic Assessment Report, comply with the Sound Level Limit of 40 dBA as described in Publication NPC-232, subject to adjustment for tonality as described in Publication NPC-104;

(2) the Equipment is constructed and installed at either of the following locations:

(a) at the locations identified in Schedule B of this Approval; or

(b) at a location that does not vary by more than 10 metres from the locations identified in Schedule B of this Approval and provided that,

i) the Equipment will comply with Condition C1 (1), and

ii) all setback prohibitions established under O. Reg. 359/09 are complied with.

(3) the Equipment complies with the noise specifications set out in Schedule B of this Approval; and

(4) all of the Noise Control Measures are fully implemented prior to the commencement of the operation of the Facility.

C2. If the Company determines that some or all of the Equipment cannot be constructed in accordance with Condition C1 (2), prior to the construction and installation of the Equipment in question, the Company shall apply to the Director for an amendment to the terms and conditions of the Approval.

C3. Within three (3) months of the completion of the construction of the Facility, the Company shall submit to the Director a written confirmation signed by an individual who has the authority to bind the Company that the UTM coordinates of the "as constructed" Equipment comply with the requirements of Condition C1 (2).

D - GROUNDWATER MONITORING

D1. The Company shall implement the groundwater sampling and monitoring program described in the report included in the Application and entitled Water Well Survey Program, Sol-Luce Kingston Solar PV Energy Project, Kingston, Ontario, dated September 6, 2012 and prepared by Dillon Consulting Limited.

D2. The Company shall report the summary of the results of the groundwater sampling and monitoring program on an annual basis to the District Manager.

E - TEMPORARY SEDIMENT AND EROSION CONTROL

E1. The Company shall install and maintain temporary sediment and erosion control measures during construction and conduct inspections once every two (2) weeks and after rain events greater than 10 mm. The inspections and maintenance of the temporary sediment and erosion control measures shall continue until they are no longer required, and at which time they shall be removed and all disturbed areas reinstated properly.

E2. The Company shall maintain records of inspections and maintenance which shall be made available for inspection by the Ministry, upon request. The record shall include the name of the inspector, date of inspection, and the remedial measures, if any, undertaken to maintain the temporary sediment and erosion control measures.

F - STORMWATER MANAGEMENT

F1. The Company shall employ best management practices for stormwater management during construction, installation, use, operation, maintenance and retiring of the Facility, as described in the Construction Plan Report included in the Application and prepared by AMEC Americas Limited.

F2. Within six (6) months of the completion of the construction of the Facility, the Company shall provide the District Manager with a written description of post-construction stormwater management conditions.

G - WATER TAKING ACTIVITIES

G1. The Company shall not take more than 50,000 litres of water on any day by any means during the construction, installation, use, operation, maintenance and retiring of the Facility.

H - SEWAGE WORKS OF THE TRANSFORMER SUBSTATION SPILL CONTAINMENT FACILITY

H1. The Company shall design and construct a transformer substation oil spill containment facility which meets the following requirements:

(1) the spill containment facility serving the transformer substation shall have a minimum volume equal to the volume of transformer oil and lubricants plus the volume equivalent to providing a minimum 24-hour duration, 50-year return storm capacity for the stormwater drainage area around the transformer under normal operating conditions. This containment area shall have:

(a) an impervious floor with walls usually of reinforced concrete or impervious plastic liners, sloped toward an outlet / oil control device, allowing for a freeboard of 0.25 metres terminating approximately 0.30 metres above grade to prevent external stormwater flows from entering the facility. The facility shall have a minimum of 300mm layer of crushed stoned (19mm to 38mm in diameter) within, all as needed in accordance to site specific conditions and final design parameters; or

(b) a permeable floor with impervious plastic walls and around the transformer pad; equipped with subsurface drainage with a minimum 50mm diameter drain installed on a sand layer sloped toward an outlet for sample collection purposes; designed with an oil absorbent material on floor and walls, and allowing for a freeboard of 0.25 metres terminating approximately 0.30 metres above grade to prevent external stormwater flows from entering the facility. The facility's berm shall be designed as needed in accordance to site specific conditions and the facility shall have a minimum 300mm layer of crushed stoned (19mm to 38mm in diameter) on top of the system, as needed in accordance to site specific conditions and final design parameters.

(2) the spill containment facility shall be equipped with an oil detection system; it also shall have a minimum of two (2) PVC pipes (or equivalent material) 50mm diameter to allow for visual inspection of water accumulation. One pipe has to be installed half way from the transformer pad to the vehicle access route;

(3) the spill containment facility shall have appropriate sewage appurtenances as necessary, such as but not limited to: sump, oil/grit separator, pumpout manhole, level controllers, floating oil sensors, etc., that allows for batch discharges or direct discharges and for proper implementation of the monitoring program described under Condition H4; and

(4) the Company shall have a qualified person on-site during construction to ensure that the system is installed in accordance with the approved design and specifications.

H2. The Company shall:

(1) within six (6) months after the completion of the construction of the transformer substation spill containment facility, provide to the District Manager an engineering report and as-built design drawings of the sewage works for the spill containment facility and any stormwater management works required for it, signed and stamped by an independent Professional Engineer licensed in Ontario and competent in electrical and environmental engineering. The engineering report shall include the following;

(a) as-built drawings of the sewage works for the spill containment facility and any stormwater management works required for it;

(b) a written report signed by a qualified person confirming the following:

(i) on-site supervision during construction
(ii) in case of a permeable floor systems: type of oil absorbent material used (for mineral-based transformer oil or vegetable-based transformer oil, make and material's specifications)
(ii) use of stormwater best management practices applied to prevent external surface water runoff from entering the spill containment facility, and
(iv) confirm adequacy of the installation in accordance with specifications.

(c) confirmation of the adequacy of the operating procedures and the emergency procedures manuals as it pertains to the installed sewage works.

(d) procedures to provide emergency response to the site in the form of pumping and clean-up equipment within 24 hours after an emergency has been identified. Such response shall be provided even under adverse weather conditions to prevent further danger of material loss to the environment.

(2) as a minimum, the Company shall check the oil detection systems on a monthly basis and create a written record of the inspections;

(3) ensure that the effluent is essentially free of floating and settle-able solids and does not contain oil or any other substance in amounts sufficient to create a visible film, sheen or foam on the receiving waters;

(4) immediately identify and clean-up all losses of oil from the transformer;

(5) upon identification of oil in the spill containment facility, take immediate action to prevent the further occurrence of such loss;

(6) ensure that equipment and material for the containment, clean-up and disposal of oil and materials contaminated with oil are kept within easy access and in good repair for immediate use in the event of:

(a) loss of oil from the transformer,
(b) a spill within the meaning of Part X of the Act, or
(c) the identification of an abnormal amount of oil in the effluent.

(7) in the event of finding water accumulation in the PVC pipes at the time of inspection, as per Condition H4, the Company shall: (a) for impervious floors, inspect the sewage appurtenances that allow drainage of the concrete pit; or (b) for permeable systems, replace the oil absorbent material to ensure integrity of the system performance and design objectives.

(8) for permeable floor systems, the Company shall only use the type of oil specified in the design, i.e. mineral-based transformer oil or vegetable-based transformer oil. If a change is planned to modify the type of oil, the Company shall also change the type of the oil absorbent material and obtain approval from the Director to amend this Approval before any modification is implemented.

H3. The Company shall design, construct and operate the sewage works such that the concentration of the effluent parameter named in the table below does not exceed the maximum Concentration Objective shown for that parameter in the effluent, and shall comply with the following requirements:

Effluent Parameters	**Maximum Concentration Objective**
Oil and Grease	15mg/L

(1) notify the District Manager as soon as reasonably possible of any exceedance of the maximum concentration objective set out in the table above;

(2) take immediate action to identify the cause of the exceedance; and

(3) take immediate action to prevent further exceedances.

H4. Upon commencement of the operation of the Facility, the Company shall establish and carry out the following monitoring program for the sewage works:

(1) the Company shall collect and analyze the required set of samples at the sampling points listed in the table below in accordance with the measurement frequency and sample type specified for the effluent parameter, oil and grease, and create a written record of the monitoring:

Effluent Parameters	Measurement Frequency and Sample Points	Sample Type
Oil and Grease	Quarterly, i.e. four times over a year, relatively evenly spaced having a minimum two (2) of these samples taken within 48 hours after a 10mm rainfall event.	Grab

(2) in the event of an exceedance of the maximum concentration objective set out in the table in Condition H3, the Company shall:

(a) increase the frequency of sampling to once per month, for each month that effluent discharge occurs, and

(b) provide the District Manager, on a monthly basis, with copies of the written record created for the monitoring until the District Manager provides written direction that monthly sampling and reporting is no longer required; and

(3) if over a period of twenty-four (24) months of effluent monitoring under Condition H4, there are no exceedances of the maximum concentration set out in the table for Concentration Objective, the Company may reduce the measurement frequency of effluent monitoring to a frequency as the District Manager may specify in writing, provided that the new specified frequency is never less than annual.

H5. The Company shall comply with the following methods and protocols for any sampling, analysis and recording undertaken in accordance with Condition H4:

(1) Ministry of the Environment publication "Protocol for the Sampling and Analysis of Industrial/ Municipal Wastewater", January 1999, as amended from time to time by more recently published editions, and

(2) the publication "Standard Methods for the Examination of Water and Wastewater", 21st edition, 2005, as amended from time to time by more recently published editions.

I - NATURAL HERITAGE AND PRE- AND POST-CONSTRUCTION MONITORING

GENERAL

I1. The Company shall implement the commitments made in the Natural Heritage Assessment and Environmental Impact Study, dated June 2012, prepared by AMEC Environment & Infrastructure, and NHA Environmental Impact Study Addendum, dated December 13, 2013, prepared by Dillon Consulting Limited, and included in the Application.

PRE- AND POST-CONSTRUCTION MONITORING – SIGNIFICANT WILDLIFE HABITAT

I2. Where identified, the Company shall implement the pre- and post-construction monitoring described in the Natural Heritage Assessment and Environmental Impact Study, dated June 2012, prepared by AMEC Environment & Infrastructure, and NHA Environmental Impact Study Addendum, dated December 13, 2013, prepared by Dillon Consulting Limited, described in Condition I1.

REPORTING AND REVIEW OF RESULTS

I4. Where identified, the Company shall report, in writing, the results of the pre- and post-construction monitoring described in Condition I2, to the Director and the Ministry of Natural Resources in accordance with reporting identified in the Natural Heritage Assessment and Environmental Impact Study, dated June 2012, prepared by AMEC Environment & Infrastructure, and NHA Environmental Impact Study Addendum, dated December 13, 2013, prepared by Dillon Consulting Limited.

I5. The pre- and post-construction monitoring report(s) described in Condition I4 shall be submitted to the Director and the Ministry of Natural Resources within ten (10) days of its completion.

I6. The Company shall post the following documents on the Company's website, if the Company has a website, within ten (10) days of completion of the documents:

(1) the pre- and post-construction monitoring report(s) described in Condition I4.

J - ENDANGERED SPECIES ACT REQUIREMENTS

J1. The Company shall ensure that any necessary authorizations under the *Endangered Species Act, 2007* have been obtained prior to the commencement of construction of the Facility in areas that support habitat for endangered or threatened species.

K - ARCHAEOLOGICAL RESOURCES

K1. The Company shall implement all of the recommendations, if any, for further archaeological fieldwork and for the protection of archaeological sites found in the consultant archaeologist's report included in the Application, and which the Company submitted to the Ministry of Tourism, Culture and Sport in order to comply with clause 22 (2) (b) of O. Reg. 359/09.

K2. Should any previously undocumented archaeological resources be discovered, the Company shall:

(1) cease all alteration of the area in which the resources were discovered immediately;

(2) engage a consultant archaeologist to carry out the archaeological fieldwork necessary to further assess the area and to either protect and avoid or excavate any sites in the area in accordance with the *Ontario Heritage Act* , the regulations under that act and the Ministry of Tourism, Culture and Sport's *Standards and Guidelines for Consultant Archaeologists* ; and

(3) notify the Director as soon as reasonably possible.

L - COMMUNITY LIAISON COMMITTEE

L1. Within three (3) months of receiving this Approval, the Company shall make reasonable efforts to establish a Community Liaison Committee. The Community Liaison Committee shall be a forum to exchange ideas and share concerns with interested residents and members of the public. The Community Liaison Committee shall be established by:

(a) publishing a notice in a newspaper with general circulation in each local municipality in which the project location is situated; and

(b) posting a notice on the Company's publicly accessible website, if the Company has a website to notify members of the public about the proposal for a Community Liaison Committee and invite residents living within a one (1) kilometer radius of the Facility that may have an interest in the Facility to participate on the Community Liaison Committee.

L2. The Company may invite other members of stakeholders to participate in the Community Liaison Committee, including, but not limited to, local municipalities, local conservation authorities, Aboriginal communities, federal or provincial agencies, and local community groups.

L3. The Community Liaison Committee shall consist of at least one Company representative who shall attend all meetings.

L4. The purpose of the Community Liaison Committee shall be to:

(a) act as a liaison facilitating two way communications between the Company and members of the public with respect to issues relating to the construction, installation, use, operation, maintenance and retirement of the Facility;

(b) provide a forum for the Company to provide regular updates on, and to discuss issues or concerns relating to, the construction, installation, use, operation, maintenance and retirement of the Facility with members of the public; and

(c) ensure that any issues or concerns resulting from the construction, installation, use, operation, maintenance and retirement of the Facility are discussed and communicated to the Company.

L5. The Community Liaison Committee shall be deemed to be established on the day the Director is provided with written notice from the Company that representative Community Liaison Committee members have been chosen and a date for a first Community Liaison Committee meeting has been set.

L6. If a Community Liaison Committee has not been established within three (3) months of receiving this Approval, the Company shall provide a written explanation to the Director as to why this has not occurred.

L7. The Company shall ensure that the Community Liaison Committee operates for a minimum period of two (2) years from the day it is established. During this two (2) year period, the Company shall ensure that the Community Liaison Committee meets a minimum of two (2) times per year. At the end of this two (2) year period, the Company shall contact the Director to discuss the continued operation of the Community Liaison Committee.

L8. The Company shall ensure that all Community Liaison Committee meetings are open to the general public.

L9. The Company shall provide administrative support for the Community Liaison Committee including, at a minimum:

(a) providing a meeting space for Community Liaison Committee meetings;

(b) providing access to resources, such as a photocopier, stationery, and office supplies, so that the Community Liaison Committee can:

(i) prepare and distribute meeting notices;

(ii) record and distribute minutes of each meeting; and

(iii) prepare reports about the Community Liaison Committee's activities.

L10. The Company shall submit any reports of the Community Liaison Committee to the Director and post it on the Company's publicly accessible website, if the Company has a website.

M - EQUESTRIAN FACILITIES

M1. Prior to the commencement of construction of the Facility, the Company shall, in consultation with the nearby equestrian facilities, prepare a Construction Plan, which shall include reasonable mitigation measures to address impacts on the nearby equestrian facilities.

M2. If a Construction Plan has not been prepared prior to the commencement of construction of the Facility, the Company shall provide a written explanation to the District Office as to why this has not occurred.

N - TRAFFIC MANAGEMENT PLANNING

N1. Prior to the commencement of construction of the Facility, the Company shall prepare a Traffic Management Plan and provide it to the City of Kingston, Loyalist Township and County of Lennox and Addington.

N2. Within three (3) months of having provided the Traffic Management Plan to the City of Kingston, Loyalist Township and County of Lennox and Addington, the Company shall make reasonable efforts to enter into a Road Users Agreement with the City of Kingston, Loyalist Township and County of Lennox and Addington.

N3. If a Road Users Agreement has not been signed with the City of Kingston, Loyalist Township and County of Lennox and Addington within three (3) months of having provided the Traffic Management Plan to the City of Kingston, Loyalist Township and County of Lennox and Addington, the Company shall provide a written explanation as to why this has not occurred.

O - OPERATION AND MAINTENANCE

O1. Prior to the commencement of the operation of the Facility, the Company shall prepare a written manual for use by Company staff outlining the operating procedures and a maintenance program for the Equipment that includes as a minimum the following:

(1) routine operating and maintenance procedures in accordance with good engineering practices and as recommended by the Equipment suppliers;

(2) emergency procedures;

(3) procedures for any record keeping activities relating to operation and maintenance of the Equipment; and

(4) all appropriate measures to minimize noise emissions from the Equipment.

O2. The Company shall;

(1) update, as required, the manual described in Condition O1; and

(2) make the manual described in Condition O1 available for review by the Ministry upon request.

O3. The Company shall ensure that the Facility is operated and maintained in accordance with the Approval and the manual described in Condition O1.

P - RECORD CREATION AND RETENTION

P1. The Company shall create written records consisting of the following:

(1) an operations log summarizing the operation and maintenance activities of the Facility;

(2) within the operations log, a summary of routine and Ministry inspections of the Facility; and

(3) a record of any complaint alleging an Adverse Effect caused by the construction, installation, use, operation, maintenance or retirement of the Facility.

P2. A record described under Condition P1(3) shall include:

(1) a description of the complaint that includes as a minimum the following:

(a) the date and time the complaint was made;

(b) the name, address and contact information of the person who submitted the complaint;

(2) a description of each incident to which the complaint relates that includes as a minimum the following:

(a) the date and time of each incident;

(b) the duration of each incident;

(c) the wind speed and wind direction at the time of each incident;

(d) the ID of the Equipment involved in each incident and its output at the time of each incident;

(e) the location of the person who submitted the complaint at the time of each incident; and

(3) a description of the measures taken to address the cause of each incident to which the complaint relates and to prevent a similar occurrence in the future.

P3. The Company shall retain, for a minimum of five (5) years from the date of their creation, all records described in Condition P1, and make these records available for review by the Ministry upon request.

Q - NOTIFICATION OF COMPLAINTS

Q1. The Company shall notify the District Manager of each complaint within two (2) business days of the receipt of the complaint.

Q2. The Company shall provide the District Manager with the written records created under Condition P2 within eight (8) business days of the receipt of the complaint.

Q3. If the Company receives a complaint related to groundwater, the Company shall contact the District Manager within one (1) business day of the receipt of the complaint to discuss appropriate measures to manage any potential groundwater issues.

R - CHANGE OF OWNERSHIP

R1. The Company shall notify the Director in writing, and forward a copy of the notification to the District Manager, within thirty (30) days of the occurrence of any of the following changes:

(1) the ownership of the Facility;

(2) the operator of the Facility;

(3) the address of the Company;

(4) the partners, where the Company is or at any time becomes a partnership and a copy of the most recent declaration filed under the *Business Names Act* , R.S.O. 1990, c.B.17, as amended, shall be included in the notification; and

(5) the name of the corporation where the Company is or at any time becomes a corporation, other than a municipal corporation, and a copy of the most current information filed under the *Corporations Information Act* , R.S.O. 1990, c. C.39, as amended, shall be included in the notification.

SCHEDULE A

Facility Description

The Facility shall consist of the construction, installation, operation, use and retiring of the following:

(a) Seventy (70) unit blocks of photovoltaic (PV) modules or panels, each containing one (1) cluster consisting of two (2) 800 kW inverters and one (1) 34.5 kV/1.6-MVA transformer, and eight (8) unit blocks of PV modules or panels, each containing one (1) cluster consisting of one (1) 800 kW inverter and one (1) 34.5 kV/0.8-MVA transformer, with a total name plate capacity of up to approximately 100 megawatts (AC); and

(b) associated ancillary equipment, systems and technologies including, but not limited to, one (1) transformer substation, on-site access roads, below and above grade cabling, and below and above grade distribution and transmission lines,

all in accordance with the Application.

SCHEDULE B

Coordinates of the Equipment and Noise Specifications

Table B1: Coordinates of the Equipment are listed below in UTM, Z17-NAD83 projection

Note: Each Sound Power Level value in all the above tables corresponds to the combined output of all the identified equipment in each cluster, including the 5 decibel (dB) adjustment for tonality as prescribed in Publication NPC-104.

SCHEDULE C

Noise Control Measures

Acoustic Barrier

One (1) three-sided 5.6 metres high acoustic barrier, positioned as per Table 4 and Figure 4 in the Acoustic Assessment Report. The acoustic barrier shall be continuous without holes, gaps and other penetrations, and having surface mass at least 20 kilograms per square metres.

Acoustic Enclosure

In accordance with Section 5.4 of the Acoustic Assessment Report, each of the inverter clusters S_12_4_I, S_14A_1_I, S_14A_10_I, S_14A_11_I, S_14A_2_I, S_14A_5_I, S_14A_9_I, S_19_1_I, S_19_2_I, S_23_1_I, S_24_1_I, S_25A_10_I, S_25A_11_I, S_25B_10_I shall be encased in an acoustic enclosure with acoustic louvers for the openings., capable of providing the following values of Insertion/Transmission-Loss in 1/1 octave frequency bands:

Acoustic Enclosure Specifications, [dB]

Name	Octave Band Centre Frequency (Hz)							
	63	125	250	500	1000	2000	4000	8000
Acoustic Enclosure	0	4	4	6	10	17	12	0

The reasons for the imposition of these terms and conditions are as follows:

1. Conditions A1 and A2 are included to ensure that the Facility is constructed, installed, used, operated, maintained and retired in the manner in which it was described for review and upon which Approval was granted. These conditions are also included to emphasize the precedence of conditions in the Approval and the practice that the Approval is based on the most current document, if several conflicting documents are submitted for review.

2. Conditions A3 and A4 are included to require the Company to provide information to the public and the local municipality.

3. Conditions A5, A6 and A7 are included to ensure that final retirement of the Facility is completed in an aesthetically pleasing manner, in accordance with Ministry standards, and to ensure long-term protection of the health and safety of the public and the environment.

4. Condition A8 is included to require the Company to inform the Ministry of the commencement of activities related to the construction, installation and operation of the Facility.

5. Condition B is intended to limit the time period of the Approval.

6. Condition C1 is included to provide the minimum performance requirement considered necessary to prevent an Adverse Effect resulting from the operation of the Equipment and to ensure that the noise emissions from the Equipment will be in compliance with applicable limits set in Publication NPC-232.

7. Conditions C2 and C3 are included to ensure that the Equipment is constructed, installed, used, operated, maintained and retired in a way that meets the regulatory setback prohibitions set out in O. Reg. 359/09.

8. Conditions D. E, F, G, H, I, J, M and N are included to ensure that the Facility is constructed, installed, used, operated, maintained and retired in a way that does not result in an Adverse Effect or hazard to the natural environment or any persons.

9. Condition K is included to protect archaeological resources that may be found at the project location.

10. Condition L is included to ensure continued communication between the Company and the local residents.

11. Condition O is included to emphasize that the Equipment must be maintained and operated according to a procedure that will result in compliance with the Act, O. Reg. 359/09 and this Approval.

12. Condition P is included to require the Company to keep records and provide information to the Ministry so that compliance with the Act, O. Reg. 359/09 and this Approval can be verified.

13. Condition Q is included to ensure that any complaints regarding the construction, installation, use, operation, maintenance or retirement of the Facility are responded to in a timely and efficient manner.

14. Condition R is included to ensure that the Facility is operated under the corporate name which appears on the application form submitted for this Approval and to ensure that the Director is informed of any changes.

NOTICE REGARDING HEARINGS

In accordance with Section 139 of the Environmental Protection Act, within 15 days after the service of this notice, you may by further written notice served upon the Director, the Environmental Review Tribunal and the Environmental Commissioner, require a hearing by the Tribunal.

In accordance with Section 47 of the Environmental Bill of Rights, 1993, the Environmental Commissioner will place notice of your request for a hearing on the Environmental Registry.

Section 142 of the Environmental Protection Act provides that the notice requiring the hearing shall state:

1. The portions of the renewable energy approval or each term or condition in the renewable energy approval in respect of which the hearing is required, and;
2. The grounds on which you intend to rely at the hearing in relation to each portion appealed.

The signed and dated notice requiring the hearing should also include:

3. The name of the appellant;
4. The address of the appellant;
5. The renewable energy approval number;
6. The date of the renewable energy approval;
7. The name of the Director;
8. The municipality or municipalities within which the project is to be engaged in;

This notice must be served upon:

The Secretary* Environmental Review Tribunal 655 Bay Street, 15th Floor Toronto, Ontario M5G 1E5	AND	The Environmental Commissioner 1075 Bay Street, 6th Floor Suite 605 Toronto, Ontario M5S 2B1	AND	The Director Section 47.5, *Environmental Protection Act* Ministry of the Environment 2 St. Clair Avenue West, Floor 12A Toronto, Ontario M4V 1L5

*** Further information on the Environmental Review Tribunal's requirements for an appeal can be obtained directly from the Tribunal at: Tel: (416) 314-4600, Fax: (416) 314-4506 or www.ert.gov.on.ca**

Under Section 142.1 of the Environmental Protection Act, residents of Ontario may require a hearing by the Environmental Review Tribunal within 15 days after the day on which notice of this decision is published in the Environmental Registry. By accessing the Environmental Registry at www.ebr.gov.on.ca , you can determine when this period ends.

Approval for the above noted renewable energy project is issued to you under Section 47.5 of the Environmental Protection Act subject to the terms and conditions outlined above.

DATED AT TORONTO this 2nd day of April, 2014

Good Morning Sarah,

On behalf of Kingston Solar LP, please find attached as copy of the Notice of Amendment Letter for the Sol-Luce Kingston Solar PV Energy Project (REA #: 1016-97YHC7). A hard copy has been sent to you by courier as well. A Modifications Document providing further details on the proposed technical changes will follow shortly.

Thank you,
Megan

RE: SOL-LUCE KINGSTON SOLAR PV ENERGY PROJECT REA AMENDMENT LETTER

Dear Ms. Paul,

Kingston Solar LP is proposing to develop, construct and operate the Sol-Luce Kingston Solar PV Energy Project, with a nameplate capacity of 100 MW AC. A Renewable Energy Approval (REA) application was submitted for this project in September 2012. The REA application was subsequently amended during the MOECC's technical review to accommodate visual and landscape setback requirements from the City of Kingston and Loyalist Township. The application was re-submitted to the MOECC in January of 2014.

A REA was granted by the Ministry of the Environment (MOE) on April 2, 2014 (REA Number: **1016-97YHC7**).

This letter provides an overview of amendments proposed for the Sol-Luce Kingston Solar PV Energy Project, which we believe to be a technical change amendment under REA. We are seeking confirmation that the following potential amendments are considered technical changes by the MOECC. Upon confirmation, it is anticipated that a formal Modifications Document for the Project will be submitted for review to the MOECC. We understand the review and acceptance of this letter will take between 2-3 business days.

The project modifications incorporated in this amendment include: addition of two (2) DSTATCOM units and two (2) supporting fixed reactor banks, the addition of one (1) Neutral Ground Reactor (NGR), and changes to site layout, including the removal of 12 Medium Voltage Power Platforms (MVPP), for a total reduction from 78 MV Stations to 66. As a result of engineering improvements (specifically, the decrease in the number of MVPPs), the footprint of the project location has decreased. For clarity, all project components remain within the permitted REA boundary.

The REA application submitted to the MOECC in January of 2014 accommodated an over-build of approximately 120 MW AC, to allow for operational flexibility during detailed design. The final design for the construction of the Project reflects a layout with a total nameplate capacity of 100

MW AC, hence the reduction in the total number of MVPPs. The remaining MVPPs remain in the locations outlined in Schedule B of the REA.

Further consultation with the Ministry of Natural Resources and Forestry (MNRF) was not warranted for the proposed technical changes. As the final design for the project does not exceed the original project location boundary, no amendments to the Natural Heritage Assessment are required. The MNRF has been copied on this letter. Any correspondence received in response from the MNRF will be subsequently forwarded to the MOECC.

Similar to the above, the technical changes described in this report do not require amendments to either the Cultural Heritage or Archaeological Assessments completed and reviewed by the Ministry of Tourism, Culture and Sport (MTCS). The extent of the project location did not change and the project area was studied and commented on in the original REA submission. The locations of the project components, installation methods or equipment specifications would not change the results or information presented related to cultural heritage or archaeological resources for this project. The MTCS has been copied on this letter. Any correspondence received in response from the MTCS will be subsequently forwarded to the MOECC.

We trust the above contains sufficient information to confirm that the proposed changes to the above referenced REA are considered minor technical changes. If additional information or clarification is required, please do not hesitate to contact me.

Sincerely,

Mr. David Oxtoby

David Oxtoby
Kingston Solar LP
181 University Avenue, Suite 300
Toronto, ON M5H 3M7

Dear Mr. Oxtoby,

The Ministry of the Environment and Climate Change (MOECC) is in receipt of Kingston Solar LP's May 25, 2015 letter to the Director with respect to proposed amendments to Renewable Energy Approval (REA) No.: 1016-97YHC7 for the Sol-Luce Kingston Solar PV Energy Project.

In reviewing the May 25, 2015 letter, the MOECC referred to Chapter 10, "Making Changes to Renewable Energy Approval (REA) Projects" in the *Technical Guide to Renewable Energy Approvals*, in order to assist in determining the type of change and next steps.

The MOECC understands that the proposed changes consist of the addition of two DSTATCOM units and two supporting fixed reactor banks; the addition of one neutral ground reactor; and changes to the site layout, including the removal of twelve Medium Voltage Power Platforms (MVPP's). The letter indicates that the footprint of the project location has decreased and all components remain within the permitted boundary.

The letter also states that further consultation with the Ministry of Natural Resources and Forestry (MNRF) and the Ministry of Tourism, Culture and Sport (MTCS) are not warranted for the proposed changes. Based on the brief description of the proposed changes in the May 25 2015 letter, the MOECC concurs that comments from MNRF and MTCS are likely not required; however, if any comments are provided by MNRF and MTCS subsequent to this letter that may require additional study(ies) by Kingston Solar LP, it may result in the MOECC adjusting the determination of the type of change. Please ensure you continue to copy MNRF and MTCS on any further correspondence on this project going forward.

The proposed changes as described in the May 25, 2015 letter do not have the potential to result in increased environmental effects that are significant. Therefore, the MOECC agrees with Kingston Solar LP's determination that the proposed changes are technical changes.

Proponents proposing technical changes should provide a notice of project change(s) in the form approved by the Director. The notice of proposed change(s) must include the following information:

- Renewable Energy Approval number;
- IESO Reference Number;
- Name and contact information of the applicant;

- A brief description of the project;
- A map identifying the project location;
- A description of the proposed change(s) and the rationale for the change(s); and
- A description of where information and documentation regarding the proposed change(s) can be located.

The notice must be published and circulated in accordance with subsection 16.0.1(3)(1) or 32.3(1)(1) and 32.3(1)(2), as applicable, of O. Reg. 359/09.

This notification constitutes the minimum requirement, and proponents are encouraged to give copies of the notice to other potentially interested persons or groups, including those that attended public meetings or submitted comments regarding the project. Please also ensure that you provide the MOECC with a copy of the notice, and information on how it was distributed, and to whom.

Kingston Solar LP must make all revised reports/studies in respect of the proposed change(s) and any new reports/studies (i.e., a Modification Document) prepared in respect of the proposed change(s) available to the public on your website.

Once the notification requirements have been completed, you may submit a formal REA amendment application to the MOECC. When the MOECC receives the REA amendment application (including all revised documents) we will screen the application to ensure that it includes all of the information the MOECC requires to process the amendment.

The MOECC has also noticed that the address for Kingston Solar LP as referenced in the May 25, 2015 letter is different than that issued in the Approval. As per Condition R1 of the Approval, the Company must notify the Director within 30 days of the occurrence of an address change. If the address of the Company has changed, please include this as part of your REA Amendment Application.

Finally, please ensure that you submit both a hard copy and an electronic copy of your application, along with the $300 application fee when submitting.

When the MOECC has made a decision to either approve or not approve the amendment, an Information Notice will be posted on the Environmental Registry (EBR) to inform interested stakeholders.

Yours sincerely,

Sarah Raetsen

1. Introduction

Kingston Solar LP is developing a 100-megawatt (MWac) ground-mount solar photovoltaic (PV) project to be known as the Sol-Luce Kingston Solar PV Energy Project. The proposed project is generally bounded by Highway 38 to the east, Mud Lake Road/County Road 19 to the west, Quabbin Road to the north, and Highway 401 to the south. The proposed project falls within two municipalities; the City of Kingston to the east and Loyalist Township to the west. A Renewable Energy Approval (REA) application was submitted for this project on September 18, 2012 and received the 'deemed complete' status by the Ministry of Environment and Climate Change (MOECC) on February 12, 2013. The project was undergoing technical review by the MOECC when the clock was stopped to accommodate a Major Design Change and technical changes to the project. The REA application was resubmitted to the MOECC in January of 2014, and modifications were made to the Noise Study Report based on feedback from the Ministry in March 2014. A Renewable Energy Approval [REA No. **1016-97YHC7**] was issued by the MOECC on April 2, 2014.

This Revised Noise Study Report (NSR) is based on the final design of the Project and includes the final number and locations of the Medium Voltage (MV) inverter stations, as well as addition of two (2) DSTATCOMs with Fixed Reactor Banks (FRB) and one (1) Neutral Grounding Reactor (NGR). The previous version of the NSR was based on an overbuilt layout with 78 MV Stations. In this NSR, the final design number of MV stations (i.e., 66 MV stations) have been included in the assessment. As part of assessing impact on the grid, Hydro One Networks Inc. (HONI) reviews generation projects and grid connections points and requires installation of technologies that would maintain high MVAR output at depressed system voltages and/or filter out spikes in current. For this project, it was determined that DSTATCOM units, supported by FRBs would be required. This NSR concludes that with the implementation of the noise mitigation measures presented in this report, the Sol-Luce Kingston Solar PV Energy Project will be in compliance with MOECC Publication NPC-300 *Environmental Noise Guideline's* Class 3 Areas (Rural), for all sources assessed in this study.

2. The Proponent

Kingston Solar LP is managing and coordinating the approvals process for the Sol-Luce Kingston Solar PV Energy Project. Should there be any questions about the proposed technical changes for this Project, please contact:

Full Name of Company:	*Kingston Solar LP*
Address:	*181 University Avenue, Suite 300, Toronto, Ontario M5H 3M7*

3. Overview of Noise Study

3.1 Summary of Acoustic Environment & Applicable Noise Limits

The background ambient noise, exclusive of that generated by the Sol-Luce Kingston Solar PV Energy Project, can be characterized as having qualities of a Class 3 (Rural) Area, as described in the Ontario Ministry of the Environment Noise Pollution Control Publication NPC-232 *Sound Level Limits for Stationary Sources in Class 3 Areas (Rural).* The primary contributor to the background sound during the daytime and nighttime periods are sounds of nature and occasional vehicle traffic on nearby roadways.

The NPC-232 Class 3 Area exclusion limits of 45 dBA for daytime (07:00 – 19:00), 40 dBA for evening (19:00 to 23:00) and 40 dBA for nighttime (23:00 to 07:00) were selected to represent the performance limits at noise sensitive receptors [note: for the purposes of this report, since the limits for evening and nighttime are the same, the nighttime is defined as 19:00 to 07:00].

Due to the proximity of two neighbouring proposed solar facilities (SunE Westbrook Solar Farm and Kingston Gardiner Hwy 2 South), the noise sources for all three proposed facilities are modelled together to address cumulative potential noise impacts.

3.2 Statement of Compliance

With the implementation of the noise mitigation measures indicated in this report (Section 5.4), the Sol-Luce Kingston Solar PV Energy Project will comply with the daytime and nighttime noise criteria as defined in the Ontario Ministry of the Environment and Climate Change Noise Pollution Control Publication NPC-300, for Class 3 Areas (Rural), for all sources assessed in this study.

4. Facility Description

The Sol-Luce Kingston Solar PV Energy Project will consist of approximately 465,000 solar PV modules. These will be contained in a series of fixed racking systems which will be supported by steel uprights on mounted driven steel piles, steel helical screw piles or cast-in-drilled-hole foundations, depending on the soil conditions within the project location. Solar PV panels (approximately 300 watts each) will be mounted on the racks and the panels and racks will be aligned in rows approximately 5 - 7 metres apart.

MV Stations will be installed to convert DC to AC current and boost the voltage for connection to the grid. The components that emit noise are as follows:

Substation Transformer

One (1) 34.5/240 kV, 110 MVA (max) substation transformer will be installed to step up the current for connection with the grid. The substation transformer will be manufactured by ABB Corporation or equivalent. The transformer specifications, including National Electrical Manufacturer's Association (NEMA) noise rating and dimensions are provided in **Appendix A**. The octave spectrum for the substation transformer was calculated using IEEE standard, accounting for 0.3m increase in dimensions. The transformer is oversized and can handle up to 110 MVA (ONAF). Noise spectrum calculation is presented in **Appendix A**. The sound power calculation includes a 5 dB tonal penalty across the octave band.

Medium Voltage (MV) Stations

For the Sol-Luce Kingston Solar PV Energy project, there are 66 MV stations, 60 of which consist of two (2) 800 kW inverters and one (1) 1.6 MVA inverter transformer and six (6) of them consist of one (1) 800 kW inverter and one (1) 0.8 MVA inverter transformer (see **Appendix A**).

Inverters

A total of 126 inverters (to convert DC to AC current) will be used at the project location. Each inverter will have its own cabinet-type enclosure and will be mounted on a concrete platform inside a larger enclosure. The inverters will be SMA's Sunny Central model SC800CP-US or equivalent, rated for up to 800 kVA of continuous power output. The manufacturer's noise data for the inverter, provided in 1/3 octave band, was used for this assessment (see **Appendix A**).

Inverter Transformers

A total of 66 inverter transformers will be installed beside the inverters to boost the AC voltage for connection to the grid. Sixty (60) of the inverter transformers will have a power rating of up to 1.6 MVA for each inverter station. Six (6) inverter transformers will have a power rating of up to 0.8 MVA. The inverter transformers will be located on concrete platforms next to the inverter enclosures.

DSTATCOM Inverter System

The Sol-Luce Solar facility will also include two (2) Distributed STATic COMpensator (DSTATCOM) inverter systems, which will maintain high MVAR output at depressed system voltages. Since the DSTATCOM can maintain constant current over its operating voltage range, the MVAR output of the system is linearly proportional to the system voltage. The DSTATCOM also has a short-term transient current rating, which allows it to provide even more MVAR to assist in the recovery of depressed voltages.

One of the DSTATCOM inverter systems includes eight (8) inverters and the other one includes seven (7) inverters, all of which are mounted in a self-standing frame and are enclosed in steel containers (DSTATCOM container). Each inverter has its own controls, circuit breaker and a small AC filter used to eliminate any high-frequency harmonic voltages in the output of the PWM waveform coming from the inverter. Each inverter is connected to a 2.5 MVA pad-mounted transformer (a total of four transformers per DSTATCOM inverter system). One of the DSTATCOM systems has a power rating of 10 mVAR and the other 8.75 mVAR. The noise data for the DSTATCOM inverter system was obtained from HGC Engineering report, dated October 21, 2013. A copy of the report is provided in **Appendix A**. Conservatively, noise data for the higher powered system (i.e., 10 mVAR) was used for both DSTATCOM systems. The two DSTATCOM units are installed within the substation yard (see **Figure 2**) and will be supported by two (2) Fixed Reactor Banks (FRBs). The function of the FRB is to filter out spikes of current that may exist between power generation and load (the grid). The FRB consists of three isolated inductors, one for each of the three line phases. The noise for the FRB was calculated using manufacturer specified data and calculation of spectrum similar to that of a transformer. Manufacturer data and calculations are presented in **Appendix A**.

Neutral Grounding Reactor (NGR)

An NGR will be an inductive element in the electrical circuit of the project. Due to natural behavior of an inductor, NGRs are used for limiting the maximum fault current to a value which will not damage the equipment in the power system, yet allow sufficient flow of fault current to operate protective relays to clear the fault. For this project, the NGR consists of a single phase (single coil) reactor that will be mounted near the substation transformer, within the substation yard (see **Figure 2**). The noise data from the manufacturer indicates a tonal noise with a peak at 125 Hz (see **Appendix A**).

Figure 2 identifies the MV stations and the substation yard. The octave spectra and the overall Sound Power Levels (PWLs) for all on-site noise sources are presented in **Table 1**.

Table 1: Summary of Noise Source Types

Source		Octave Spectrum (dB)									Overall	
Type	Count	31.5	63	125	250	500	1000	2000	4000	8000	A	lin
Inverter	126	96.2	89.1	86.7	88.2	88.3	82.7	86.4	95	84.4	97.3	100.4
0.8 MVA Inverter Transformer	6	66.2	72.2	74.2	69.2	69.2	63.2	58.2	53.2	46.2	69.6	78.2
1.6 MVA Inverter Transformer	60	65.3	71.3	73.3	68.3	68.3	62.3	57.3	52.3	45.3	68.7	77.3
Substation Transformer	1	108.5	114.5	116.5	111.5	111.5	105.5	100.5	95.5	88.5	111.9	120.5
DSTATCOM 10 MVAR	2		88.0	106.0	90.0	86.0	75.0	69.0	79.0	69	91.6	106.2
Fixed Reactor Bank (FRB)	2	86.4	92.4	94.4	89.4	89.4	83.4	78.4	73.4	66.4	89.8	98.4
Neutral Grounding Reactor (NGR)	1		63.3	73.4	40.6						57.4	73.8

Note:
A: A-weighted, Lin: Linear
The manufacturer-specified A-weighted spectra were converted to linear spectra and presented in this table.
The 5 dB tonal penalty is included in the sound power levels for all the noise sources presented above (except for DSTATCOM and NGR). For these sources the 5 dB penalty is added in the model.
The sound power spectrum for inverter includes cooling fan.

4.1 Operating Hours of Facility

The solar facility is designed to operate 365 days per year. The solar panels are only able to generate electricity when the sun is shining. Similarly, the inverters only operate when the solar panels are generating electricity. Furthermore, the inverters infrequently operate at full power as full power output requires a clear sky when the sun is at peak intensity. For this assessment the inverters and transformers were conservatively assumed to be operational at full power (i.e., maximum noise emission) during both daytime (07:00 to 19:00) and nighttime (19:00 to 07:00) hours [note: nighttime power generation occurs after 19:00 during the summer].

4.2 Site Plan Identifying All Significant Sources

Figure 3 illustrates the Sol-Luce Kingston Solar PV Energy Project location and identifies 'Potential Noise Receptors' surrounding the project location within 1000 m. In addition, as per *Ontario Regulation 359/09* and guidance documents from the MOECC, 'Assumed Future Noise Receptors' must be identified on vacant lots measuring at least 100 metres by 100 metres. 45 vacant lots have been identified within 1 kilometre of the project location and are presented in **Figure 3**. In addition to the 45 vacant lot receptors for the Sol Luce project, 21 vacant lot receptors for Westbrook solar project, and 14 vacant lot receptors for Gardiner Hwy 2 solar project were included in this assessment.

5. Noise Source Summary

5.1 Noise Source Summary Table

The significant noise sources identified in this noise study are listed in **Table 2**. This table contains sound power levels, source location, sound characteristics, and any noise control measures that already exist as a part of the original equipment. Noise sources from the neighbouring solar projects (located within 2 km of the Sol-Luce Kingston Solar PV Energy Project), SunE Westbrook Solar Farm and the Kingston Gardiner Hwy 2 South project have also been included in this noise study.

Table 2: Noise Source Summary

Note:
The table includes all noise sources from neighbouring solar farms within 2 km of the subject project.
5 dB tonal penalty is included in the PWLs.
The initial letter for source IDs represent the neighbouring project as follows: W: Westbrook Solar, G: Kingston Gardiner Hwy2 Solar. Sources starting with 'MV' belong to the Sol-Luce Project.
Substations:
S_Substation: Sol-Luce Kingston PV Energy Project
G_Sub: Kingston Gardiner Hwy 2 Solar
W_ST: Westbrook Solar

Noise Source Summary Table Notes:

1. Source Locations

O – located/installed outside of a building, including on the roof
I – located/installed inside a building

2. Sound Characteristics

S – Steady
Q – Quasi Steady Impulsive
I – Impulsive
B – Buzzing
T – Tonal
C – Cyclic
Int – Intermittent

3. Noise Control Measures

S – silencer, acoustic louver, muffler
A – acoustic lining, plenum
B – barrier, berm, screening
L – lagging
E – acoustic enclosure
O – other
U – uncontrolled

5.2 Noise Source Specifications

Noise source specifications including manufacturer-specified noise data and calculation of sound power spectra are provided in **Appendix A**.

5.3 Source Power/Capacity Ratings

Manufacturer data for capacity and operating specifications for onsite noise sources can be found in **Appendix A.**

5.4 Noise Control Description & Acoustical Specifications

For the Sol-Luce Kingston Solar PV Energy Project, there are 66 MV stations, 60 of which consist of two (2) 800 kW inverters and one (1) 1.6 MVA inverter transformer and six (6) of them consist of one (1) 800 kW inverter and one (1) 0.8 MVA inverter transformer. In all cases, the inverters will each be contained in a cabinet (as per the specifications presented in **Appendix A**) and a secondary enclosure. The secondary enclosure will have louvers for ventilation. Conservatively, no additional noise mitigation measure was incorporated in the modelling for the secondary enclosure.

The secondary enclosure will have openings for ventilation through which noise can propagate to outside. Through modelling iterations it was determined that thirteen (13) of the inverter enclosures (see source IDs in **Table 3**) will require acoustic louvers for the openings. The Transmission Loss (TL) spectrum for the required acoustic louver is presented in **Table 3**.

Table 3: Noise Attenuation Data for Acoustic Louver

Noise Source ID	Noise Control		TL Spectrum (dB)					
	Type	Manufacturer	125	250	500	1000	2000	4000
MV1-3	Acoustic Louver	Greenheck or equivalent	4	4	6	10	17	12

MV5-6	Acoustic Louver	Greenheck or equivalent	4	4	6	10	17	12
MV6-4	Acoustic Louver	Greenheck or equivalent	4	4	6	10	17	12

It was determined through noise modelling iterations that the noise from the substation transformer (noise source ID: S_substation) would need to be mitigated. A “U” shaped, 6 m high noise barrier wall was incorporated in the modelling for the substation transformer. The noise wall will consist of solid material with a minimum surface area density of 20 kg/m^2. The walls will eliminate the line-of-sight between the substation transformers and the receptors to the south, southeast and southwest. The “U” shaped wall will be open on the north (see **Figure 5**). Details of the noise barrier wall, including UTM coordinates and dimensions are provided in **Table 4**. An isometric view of the noise barrier wall is presented in **Figure 4** and the site plan drawing is presented in **Figures 5**. A plan view of the wall is presented in **Appendix A**.

Table 4: Substation Transformers Barrier Wall Information

Noise Control		Construction Material	Height (m)	Total Length (m)	Distance from Source (m)	UTM Coordinates for Wall	
Type	Source					X (m)	Y (m)
Barrier Wall	Substation Transformer - Sol-Luce Kingston Solar	Continuous with Minimum Density: 20 kg/m^2	6	54.4	Varies (see Appendix A)	369417	4908803
						369417	4908783
						369432	4908783
						369432	4908803

Figure 4: Substation Transformer Barrier Wall Isometric View

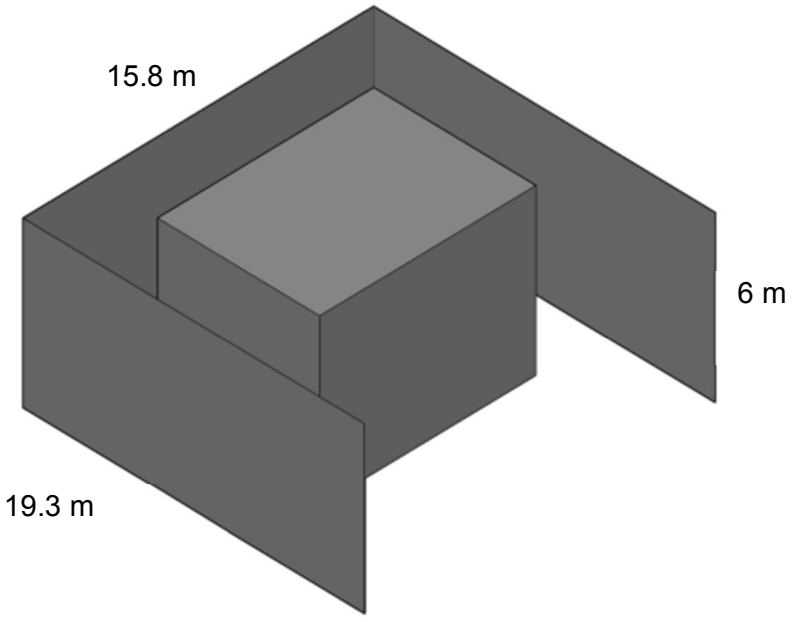

Figure 5: Transformer Noise Barrier Wall Site Plan Drawing

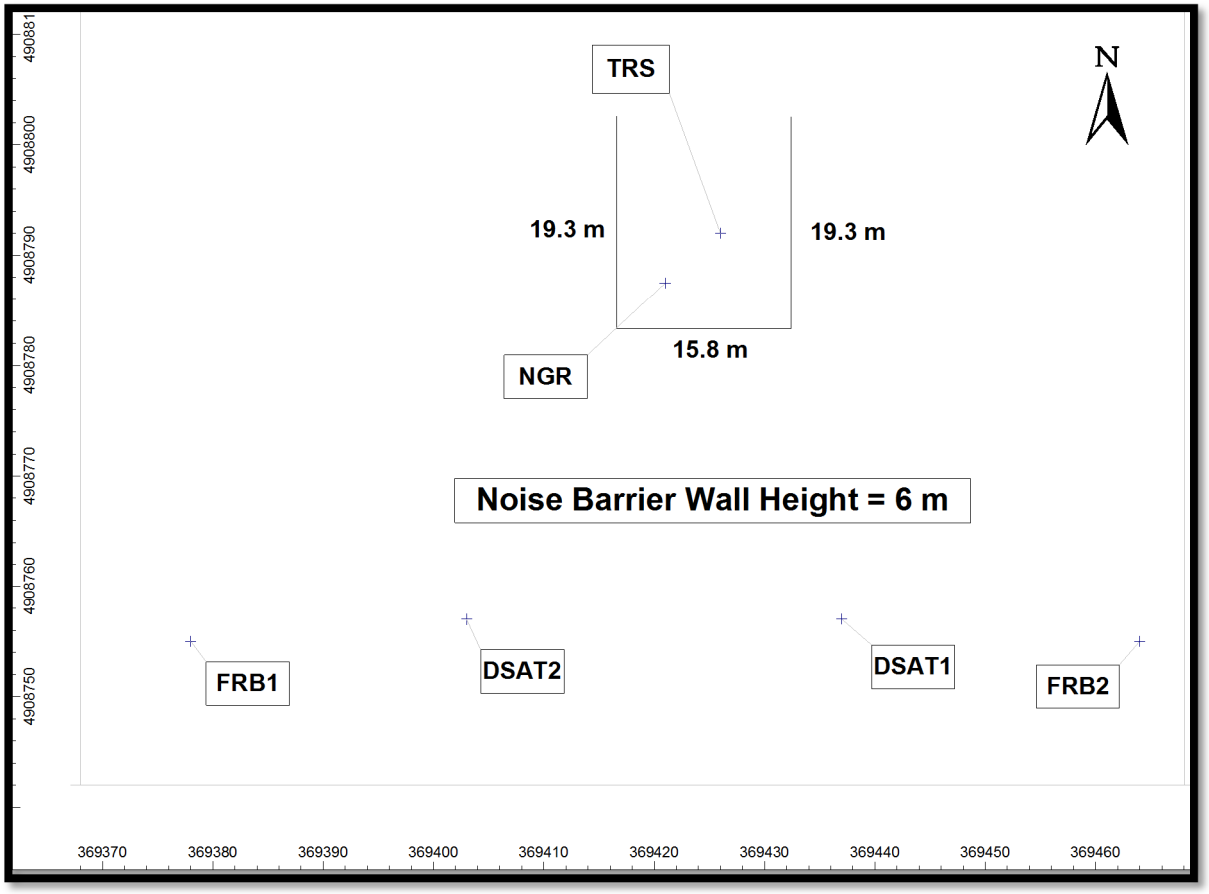

Noise mitigation measures for the neighbouring solar farms were also incorporated in the modelling. The information was obtained from the NSRs completed for the neighbouring projects.

6. Point of Reception Noise Impact Analysis

6.1 Land Use Zoning Plan

The planned solar facility will occur within lands zoned by the City of Kingston as 'Agricultural' with some areas zoned as 'Undeveloped Aggregate Resource Area' by the City of Kingston and Loyalist Township. Zoning and land use information is provided in the *Design and Operations Report* (AMEC, 2012) of the REA submission.

6.2 Scaled Area Location Plan

Figure 3 is an aerial photo showing the location of the proposed Sol-Luce Kingston Solar PV Energy Project and the surrounding area including the nearby receptors.

6.3 Points of Reception (PORs) List and Description

The Model Municipal Noise Control By-law defines a Point of Reception (POR)/receptor as "*any point on the premises of a person where sound or vibration originating from other than those premises is received.*" Noise-sensitive receptors, as defined in MOECC Publication NPC-300, include the following land uses:

- Permanent, seasonal, or rental residences;
- Hotels, motels and campgrounds;
- Schools, universities, libraries and daycare centres;
- Hospitals and clinics, nursing/retirement homes; and
- Churches and places of worship.

Conservatively, a receptor height of 4.5 metres was considered for all receptors, assuming a two-storey dwelling at each receptor location. The UTM coordinates (NAD83) of the receptors used in the noise modelling are summarized in **Table 5**. For the vacant lot receptors, the centres of the 100 metre by 100 metre lots were chosen to represent the receptor locations, as per relevant MOECC guidelines.

All receptors associated with the neighbouring solar farms (i.e., SunE Westbrook Solar Farm and Kingston Gardiner Hwy 2 South) have been included in the modelling and assessment of noise impact herein.

Note:
The initial letter for each receptor refers to the respective solar project (W: Westbrook, G: Gardiner Hwy 2, and S: Sol-Luce).
Receptor IDs with '*' are those that have project components on their property and are financially benefiting from the project.

7. Procedure for Assessing Noise Impacts at Each POR

7.1 Method Selection Factors

The worst-case noise emission scenario at each POR was modeled using the CADNA/A software program from DataKustik GmbH. The outdoor noise propagation model is based on ISO 9613, Part 1: Calculation of the absorption of sound by the atmosphere, 1993 and Part 2: General method of calculation (ISO-9613-2: 1996). The model is capable of incorporating various site-specific features such as elevation, berms, ground absorption and barriers to accurately predict noise levels at specific receptors, pertaining to noise emissions from a particular source(s). Graphical outputs generated by the CADNA/A noise model, showing the noise level contours are presented in **Figures 6** and **7** for 1.5m and 4.5m receptor heights, respectively.

7.2 Ambient Determination

No on-site measurements were made to assess the background ambient noise level at the noise-sensitive receptors. Therefore, the MOECC's default daytime and nighttime criteria for a Class 3 Area were used for this assessment.

7.3 Parameter/Assumptions for Calculations

Manufacturer-specified noise data and calculated noise levels were used in the CADNA/A software to model the noise impact at each Point of Reception (POR). Also incorporated in the modelling was the site layout for the project. The noise impact for each receptor was modelled assuming the worst-case noise emission scenario at the site. The significant noise sources for the facility include:

- Inverters Stations;
- Substation Transformer;
- DSTATCOM Inverter Systems; and,
- Neutral Grounding Reactor (NGR).
    - **Inverter Stations** – Each MV station consisted of two noise sources as follows:
        - For single-inverter stations [Source IDs: MV1-3, MV2-2, MV3-1, MV3-2, MV3-4, MV3-5, MV3-22, MV4-12, MV4-13, MV4-14, MV4-15, MV5-6 and

MV6-4], one source representing the single-inverter enclosure and one source representing the 0.8 MVA transformer.

- For double-inverter stations [all MVs except those listed above], one source representing the combined two-inverter enclosure and one source representing the 1.6 MVA transformer.

The inverter transformers (0.8 MVA and 1.6 MVA) were modeled using calculated transformer sound power spectrum based on the NEMA (noise) rating provided by the manufacturer and IEEE calculation (see **Appendix A**). The inverters were modelled using manufacturer-specified octave spectrum. As per the MOECC requirement, a 5 dB tonal penalty was added to the inverter and inverter transformer noise spectrums for the tonal aspect of the noise generated by these sources. The inverters and inverter transformers were modeled as point sources with hemi-spherical spreading.

- **Substation Transformer** – The substation transformer were modeled using calculated transformer sound power spectrum based on the NEMA (noise) rating provided by the manufacturer and IEEE calculation (see **Appendix A**). A 5 dB tonal penalty was also added to the transformer noise spectrum. Like the inverter units, the transformers were conservatively modeled using the same data for nighttime as for daytime. The transformers were modeled as point sources with hemi-spherical spreading.
- **DSTATCOM and FRB System** – the DSTATCOMs and FRBs were modelled using manufacturer-provided noise data (A noise measurement study report) and calculated sound power spectrum, respectively (see **Appendix A**). A 5 dB tonal penalty was added to the octave spectrum for both sources.
- **NGR** – The NGR was modelled using manufacturer-specified noise data (see **Appendix A**). A 5 dB tonal penalty was added to the octave spectrum for this source.

Receptors – Conservatively, a receptor height of 4.5 metres representing a receiver in the plane of a second floor window (i.e., 2-storey dwelling) was assumed for all receptor locations.

Topography – There are topographical features that extend beyond the property boundary of the project sites, and can reduce the noise impact from the proposed projects. However, conservatively, topography was not included in the noise modelling.

Reflections – Conservatively, sources were modeled assuming a third order reflection.

Ground Absorption – For the noise modeling, a global ground absorption coefficient of 0.7 was used to represent the mostly absorptive, vegetated areas, between the onsite sources and receptors.

7.4 Point of Reception Noise Impact Tables

Tables 6 summarizes the partial noise levels (i.e., contribution from each of the onsite noise sources to the receptor noise levels) and corresponding source-receptor distance for the closest (most impacted) PORs in various directions for the Sol-Luce Kingston Solar PV Energy Project. The sound level at the POR accounts for attenuation by divergence (distance), barriers, ground effects and atmospheric absorption. This table gives the sum total of these attenuations for each source. Details of the noise modelling (CADNA output file), including partial levels for all the PORs are provided in **Appendix B – CADNA\A Model Output**. Graphical output generated by CADNA noise model, showing the noise level contours are presented in **Figures 6** and **7** for 1.5m and 4.5m receptor heights, respectively.

8. Acoustic Assessment Summary

8.1 Acoustic Assessment Summary Table

Table 7 summarizes the compliance of the proposed Sol-Luce Kingston Solar PV Energy project with the applicable Sound Level Performance Limits at the designated Points of Reception. The performance limits in the table reflect the applicable sound level limits in the MOECC Publication NPC-300 for Class 3 Areas and the predicted POR sound levels reflect the cumulative receptor sound levels for Sol Luce solar project and the two neighbouring solar projects.

Table 7: Acoustic Assessment Summary TablePoint

Point of Reception		Sound Level at POR (dBA, Leq)*	Verified by Acoustic Audit (Yes/No)	Performance Limit		
ID	Description			Daytime (dBA)	Nighttime (dBA)	Compliance (Yes/No)
S-R1*	Existing Noise Receptor	35.7	No	45	40	N/A
S-R2	Existing Noise Receptor	35.2	No	45	40	Yes
S-R3	Existing Noise Receptor	37.1	No	45	40	Yes
S-R4	Existing Noise Receptor	37.2	No	45	40	Yes
S-R5	Existing Noise Receptor	35.0	No	45	40	Yes
S-R6	Existing Noise Receptor	35.0	No	45	40	Yes
S-R7	Existing Noise Receptor	35.0	No	45	40	Yes

Note:
The initial letter for each receptor refers to the respective solar project (W: Westbrook, G: Gardiner Hwy 2, and S: Sol-Luce).
Receptor IDs with '*' are those that have project components on their property and are financially benefiting from the project.

The predicted noise levels at receptors that are financially benefiting from the project are not compared against the 40.0 dBA criterion. For these receptors 'N/A' is indicated under the 'Compliance' column.

8.2 Rationale for Selecting Applicable Noise Guideline Limits

8.2.1 Acoustic Environment

The background ambient noise, exclusive of Sol-Luce project, can be characterized as a Class 3 Area as described in NPC-300. The sources that contribute to the background sound include sounds of nature as well as occasional vehicle traffic noise from nearby roadways.

For a project located in a Class 3 Area, the project is considered compliant with NPC-300 if the predicted cumulative noise levels at the nearby receptors are at or below either the exclusion limits (see **Table 8**) or the background ambient levels as measured or calculated.

Table 8: NPC-300 – Class 3 Area Exclusionary Limits

Time of Day	One Hour Leq (dBA) Class 3 Area
07:00 – 19:00	45
19:00 – 23:00	40
23:00 – 07:00	40

The applicable nighttime limit is the most restrictive level for operation of the stationary source. The background ambient sound levels at the points of reception were not measured or modeled. Therefore, the NPC-300's Class 3 Areas' exclusionary limits have been adopted as the performance limit at each of the PORs.

8.2.2 Predictable Worst Case Operating Scenario

The inverters, inverter transformers and substation transformers were all assumed to operate on a continuous basis at their maximum load during daytime, evening and nighttime hours. These sources were modeled as such.

9. Conclusion

This *Noise Study Report* was prepared as a supporting document for a technical change amendment tot eh REA for the Sol-Luce Kingston Solar PV Energy Project. The report conforms to the guidelines for an Acoustic Assessment Report as defined in Ministry of the Environment and Climate Change (MOECC) publication NPC-233 *Information to be Submitted for the Approval of Stationary Sources of Sound*. All procedures used in this assessment were conducted in accordance with the requirements of NPC-233 and additional general direction provided by the MOECC for preparation of acoustic assessment reports for solar facilities under the REA. In this NSR, it was determined that noise mitigation measures consisting of acoustic louvers to be installed on all the ventilation openings of 13 inverter enclosures, and installation of a 6m high, U-shaped noise barrier wall for the substation transformer would be required to achieve compliance.

With the implementation of the noise mitigation measures determined in this study, the proposed Sol-Luce Kingston Solar PV Energy project will comply with the daytime and nighttime noise criteria as defined in the Ontario Ministry of the Environment and Climate Change Noise Pollution Control Publication *NPC-300 Environmental Noise Guideline's* Class 3 Areas (Rural), for all sources assessed in this study.

10. Closure

This *Noise Study Report* has been prepared based on the information provided and/or approved by Kingston Solar LP and/or their contractors. This report was prepared by Dillon for the sole benefit of Kingston Solar LP to satisfy reporting requirements for the Ontario Ministry of the Environment and Climate Change. The material in the report reflects Dillon's judgment in light of the information available to Dillon at the time of this report preparation. Any use which a third party makes of this report, or any reliance on or decisions made based on it, are the responsibilities of such third parties. Dillon accepts no responsibility for damages, if any, suffered by any third party as a result of decisions made or actions based on this report.

Respectfully Submitted,

DILLON CONSULTING LIMITED

Amir A. Iravani, Ph.D., P.Eng.

Acoustic Environmental Test

SC 800CP-US central inverter

(Extract of Test report SC800CP-US-91:LE1613)

1 Overview

Project title:	SC800CP-US
Type of test / thresholds and requirements:	Sound level measurement according to DIN EN ISO 3744:2011-02 and DIN EN ISO 9614-2:2010-11 of sinusoidal, irregularly shaped, transient signals. Classification of ambient conditions in compliance with the German Noise Control Guidelines (TA Lärm). (according to Section 2)
Type of device:	e.g. solar central inverter for large-scale PV power plants
Type designation:	SC800CP-US
Test specification:	Level of emissions according to the German Noise Control Guidelines and acoustic power

2 Results

The EN 3744:04/2005 and German Noise Control Guidelines form the testing specification for the thresholds and requirements	Requirement		Results [dBA]/ without fan (distance 1m)	Results [dBA]/ with fan (distance 1m)

EN 3744:2011-02 typical value; LAeq averaged [1]	-	-	-	78,74
§48 of the German Federal Emission Control ACT (BImSchG): 09-2002 German Noise Control Guidelines; L_{pa} [2]	-	-	-	77,81
EN 9614-2 sound power L_{WA} [3]	-	-	-	92,30
Sound pressure level in 10m L_{xpA} [4]	-	-	-	64,31
Sound pressure level in 50m L_{xpA} [4]	-	-	-	50,32
Overall result (if applicable)			*Standard requirments: - passed	

* Dependent on the local conditions at the mounting location (distance of 10m standard)

3 Operating States

The following states and configurations have been defined as operating conditions:

- Operation of the inverter.
- Operating conditions: UDC =820 V; 800 kW
- The device fans must be running.
- The unit under test must have reached its operating temperature.
- The unit under test must have reached an operating temperature of 25 °C.

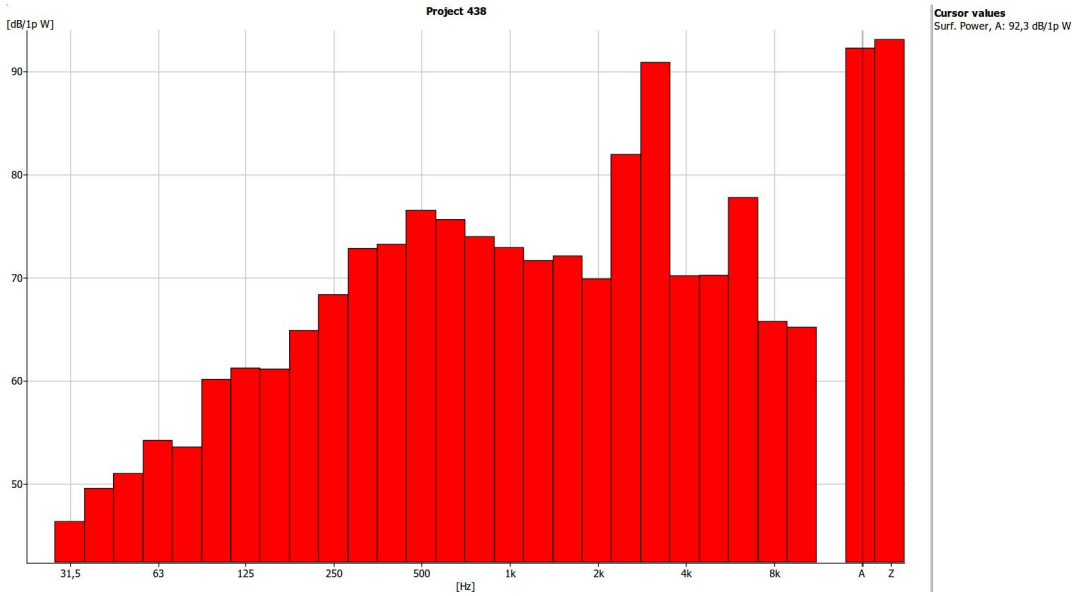
4 Calculating the Acoustic Power

L_{pA} =	average sound pressure level on the measurement surface [dB_A] *	77.81
S =	overall measurement surface [m^2]	28.09
S_0 =	1 [m^2]	

* This specified spatially/temporally averaged sound pressure level was determined using the calcu-lated acoustic power level.
$L_{PA} = L_{WA} - 10\log (S/S_0)$

Acoustic power of L_{WA}= 92,3 dBA/W results for the measurement.

Acoustic Power Levels of the Third Octave Band Frequencies According to EN ISO 9614-2



A-rated sound power = 92.3 $dB_{A/W}$

Z-rated sound power = 93.1 $dB_{A/W}$

A-rated acoustic power – based on physiologic human hearing

Z-rated acoustic power – technically linear measured value

5 Overview of the Acoustic Power

Third octave band center frequency [Hz]	Acoustic power- level LwA [dBA/pW] 880 kW	Acoustic power- level LwZ [dBA/pW] 880 kW
25 Hz	42,33	-
31.5 Hz	46,34	-
40 Hz	49,56	-
50 Hz	51	-
63 Hz	54,21	-
80 Hz	53,57	-
100 Hz	60,14	-
125 Hz	61,23	-
160 Hz	61,13	-
200 Hz	64,88	-
250 Hz	68,36	-
315 Hz	72,83	-
400 Hz	73,24	-
500 Hz	76,54	-
630 Hz	75,64	-
800 Hz	73,99	-
1 kHz	72,93	-
1.25 kHz	71,67	-
1.6 kHz	72,11	-
2 kHz	69,89	-
2.5 kHz	81,96	-
3.15 kHz	90,89	-
4 kHz	70,19	-
5 kHz	70,24	-
6.3 kHz	77,78	-
8 kHz	65,76	-
10 kHz	65,2	-
Acoustic power above the surface	A-rated	Z-rated
	92,3	93.1

6 Deriving the Emission Sound Pressure Level at a Distance

The calculated acoustic power can be used to derive an A-rated sound pressure level L_{xpA} for undirected sources at any distance x.

$$LxpA \quad LwA + Ko - 10 \cdot \log\left(4 \cdot \pi \cdot \frac{X^2}{So}\right)$$

K_0 = solid angle index on the floor 3 [dB]
X = distance from the source [m]
S_0 = 1 m

Device	Distance X [m]	Sound pressure level LxpA [dBA] without fan	Sound pressure level LxpA [dBA] with fan
SC800CP-US	10	–	64,30
	50	–	50.33

7 Appendix - Calculations

deriving sound pressure level at a distance

LxpA = LWA + K0 - 10log (4*PI*(x^2/S0))

LWA 92,3dB
K0 3dB
x 10m
S0 1m

LxpA 64,31dBA

Substation Transformer 110 MVA - Sound Power Calc. based on measured data

Height	5.2 m
Length	7.8 m
Width	7.2 m
Vertical Surface Area (includes 0.3m in all directions)	112 m^2
Horizontal Surface Area (includes 0.3m and 2m)	94 m^2
Total Surface area	205.9 m^2

Lw = Lp + 10 x log (S)

Fan on	Lp	84
	Lw	107.1

Lp: Sound pressure level
Lw: Sound Power Level

Fan on

Centre Frequency	Corr1	Corr2	PWL (Linear)	A-weighted correction	PWL (A-weighted)	PWL + 5 dB tonal penalty
31.5	-1	-2.4	103.74	-39.4	64.34	69.34
63	5	-2.4	109.74	-26.2	83.54	88.54
125	7	-2.4	111.74	-16.1	95.64	100.64
250	2	-2.4	106.74	-8.6	98.14	103.14
500	2	-2.4	106.74	-3.2	103.54	108.54
1000	-4	-2.4	100.74	0	100.74	105.74

TITLE: DIMENSIONAL OUTLINE JOB # HA544A
DWN: SB CHK: VKR DATE: 12/04/2014
D 49066MA001U SHEET 101 REVISION 0

ITEMS:
1. PROVISION ON BASE FOR SKIDDING
2. TRANSFORMER LIFTING LUGS (4) FOR LIFTING COMPLETELY OIL FILLED AND ASSEMBLED UNIT
3. NEMA GROUND PADS, STAINLESS STEEL, LOCATED ON ALL 4 CORNERS OF TANK (4)
4. STAINLESS STEEL DIAGRAMMATIC NAMEPLATE
5. 24" DIA MANHOLES WITH COVER (4)
6. WELDED TOP COVER WITH SLOPES FROM CENTRELINE
7. COOLING RADIATORS (13), HOT DIPPED GALVANIZED, UNPAINTED, DEMOUNTABLE WITH ISOLATION VALVES, LIFTING EYES AND 1/2" DRAIN AND VENT PLUGS
8. HV DRAWLEAD BUSHING, 230 kV, 1050 kV BIL, 800A (3), PCORE MAKE, WITH 4 HOLE NEMA PAD
9. LV, LVN AND HVN BOTTOM CONNECTED BUSHING, 34.5 kV, 200 kV BIL, 2000A (5), PCORE, WITH 4 HOLE NEMA PAD
10. 2" COMBINATION LOWER DRAIN AND FILTER VALVE WITH 3/8" SAMPLER AND PLUG.
11. 2" UPPER FILTER VALVE, WITH PLUG (2)
12. VTC PRESSURIZATION TEST POINT/GAS INJECTION POINT WITH 1/2" BALL VALVE
13. CONSERVATOR LIQUID LEVEL GAUGE
14. OIL TEMPERATURE GAUGE WITH CONTACTS
15. PRESSURE VACUUM GAUGE (FOR SHIPPING ONLY)
16. PRESSURE RELIEF DEVICE WITH CONTACTS, FLAG , SHROUD AND PIPING
17. BOX FOR LV CT FEED-THRU'S
18. CONTROL BOX, NEMA 4, 60 x 48 x 18
19. FALL PROTECTION PLATE (3)
20. BOX FOR HV CT FEED-THRU'S AND CORE GROUND BUSHING (MAIN & PA)
21. COOLING FANS (21), MOUNTED ON BRACKETS
22. WINDING TEMPERATURE GAUGE, SIMULATION SYSTEM, WITH CONTACTS
23. JACK PADS (4) WITH PULLING EYES
24. THERMOWELLS FOR TEMPERATURE GAUGES AND RTD (4)
25. CONSERVATOR WITH FLEXIBLE AIRCEL
26. HV STATION CLASS ARRESTER, POLYMER, 240 kV, 190 kV MCOV, ABB MAKE WITH GRADING RING
27. LV STATION CLASS ARRESTER, POLYMER, 30 kV, 24.4 kV MCOV, ABB MAKE
28. CONSERVATOR SUMP WITH 2" DRAIN VALVE
29. 2" CONSERVATOR FILL VALVE
30. LOAD TAP CHANGER SWITCH COMPARTMENT, TYPE RMV-II, 69 kV, 1500A
31. LTC DE-HYDRATING BREATHER, WITH TUBING AND SHUT OFF VALVE
32. 2" FLANGED LTC OIL FILL VALVE
33. LTC VACUUM FILLING PLUG, 2"
34. LTC POSITION INDICATOR WITH DRAG HAND
35. 2" LTC GLOBE TYPE, BRONZE, DRAIN VALVE WITH 3/8" SAMPLER, AND PLUG
36. LTC HAND CRANK OPERATING LOCATION
37. LTC LIQUID LEVEL GAUGE WITH CONTACTS
38. LTC PRESSURE RELIEF DEVICE WITH CONTACTS, FLAG, SHROUD AND TUBING
39. LTC SUDDEN PRESSURE RELAY FOR LTC
40. BUCHHOLZ RELAY WITH ISOLATION VALVES (BALL TYPE) AND GAS SAMPLING VALVE
41. BOLTED ACCESS COVER ON CONSERVATOR
42. FULL HEIGHT AIR TERMINAL CHAMBER (BOLT ON TYPE) WITH PROVISION OF HINGED DOORS, CABLE SUPPORTS, BOTTOM BOLTED PLATE, PROVISION FOR SUPPORTING 6 X 1250 kcmil CABLES
43. DE-HYDRATING BREATHER FOR CONSERVATOR AIR BLADDER
44. SUPPORT FOR CONSERVATOR
45. 3" PIPING FROM CONSERVATOR TO TANK
46. SURGE COUNTERS FOR HV AND LV ARRESTERS (6)
47. 2" LOWER FILTER PRESS/VACUUM VALVE
48. 1" BOTTOM OIL SAMPLING VALVE
49. 1" TOP OIL SAMPLING VALVE
50. GE HYDRAN M2 GAS-IN-OIL MONITOR WITH SHUT OFF VALVE
51. SUDDEN PRESSURE RELAY ON MAIN TANK WITH ISOLATION VALVE
52. 4" PIPE AND FLANGE WITH COVER PLATE FOR VACUUM PUMP CONNECTION
53. NEMA LUGS SUITABLE FOR TWIN 4/0 AWG COPPER GROUND CONDUCTORS
54. FLEXIBLE PIPE CONNECTOR
55. VIEW GLASS ON LV ATC
56. GAS COLLECTING PIPE

NOTES:
1. TYPE II MINERAL OIL (PER CAN/CSA-C50 CLASS B) FILLED TRANSFORMER, APPROXIMATELY 22700 GALLONS
2. OUTDOOR SERVICE
3. PAINT: ANSI-70, URETHANE OVER EPOXY (VTC PAINT SYSTEM III), TANK INSIDE AND CORE CLAMPS PAINTED WHITE, TOP COVER AND LTC TOP WITH ANTI-SKID COATING,
4. TOUCH UP PAINT KIT PROVIDED
5. UNIT DESIGNED FOR CONSERVATOR TYPE OIL PRESERVATION SYSTEM
6. SEE 20 SERIES SHEETS FOR SCHEMATIC
7. ACCESSORY WIRING IN RIGID GALVANIZED STEEL CONDUIT; FINAL SHORT RUNS MAY BE FLEXIBLE LIQUID TIGHT CONDUIT; FAN POWER VIA WEATHERPROOF CORDS AND PLUGS
8. CG1 IS FULLY ASSEMBLED, CG2 IS AS SHIPPED, PERMANENTLY MARKED AND LABELED
9. UNIT DESIGNED FOR FULL VACUUM OIL FILLING
10. UNIT SHIPS WITH FOLLOWING ITEMS DEMOUNTED;

ITEM:	SHIPPING WEIGHT:
HV BUSHINGS/ HV PADS	2325 LBS
LV/XO/HO BUSHING & SPADE	700 LBS
HV ARRESTERS & BRACKETS	900 LBS
RADIATORS AND FANS WITH BRACKET	31,600 LBS
CONSERVATOR SUPPORTS	5000 LBS
CONSERVATOR	7000 LBS
B'RELAY PIPE & GAS EXP. PIPE	500 LBS
OIL IN TANKER (22,170GALLONS)	166,275 LBS
MAIN UNIT	222,600 LBS
345 GALLONS OF MINERAL OIL II SHIP INSIDE LTC	
UNIT SHIPS WITHOUT OIL, DRY AIR FILLED	

11. UNIT DESIGNED FOR OPERATION AT MINIMUM AMBIENT - 40deg C AND 3300 FT ELEVATION
12. GASKET COMPRESSION CONTROL VIA MACHINED GROOVE FLANGES OR METAL TO METAL STOPS EXCEPT FOR ITEMS MOUNTED IN BOXES
13. CONTRACTED DOCUMENTS SHIP INSIDE CONTROL BOX
14. ALL EXTERNAL HARDWARE TO BE STAINLESS STEEL
15. UNIT DESIGNED FOR SEISMIC ZONE Z1 AND Z2
16. UNIT SHIPS WITH IMPACT RECORDER
17. UNTANKING HEIGHT 365.00" PLUS SLINGS
18. ALL TANK SEAMS ARE WELDED FROM INSIDE AND OUTSIDE, NO CORNER WELDS WITHIN 6" OF CORNER
19. DEW POINT TO BE MEASURED BEFORE SHIPMENT
20. 5 YEARS EXTENDED WARRANTY IS PROVIDED
21. UNIT DESIGNED PER CSA STANDARDS

1. ALL WIRES ARE NUMBERED ON EACH END WITH HEAT SHRINK PLASTIC SLEEVE WRAPPED WIRE MARKERS.
2. CONTROL WIRES ARE 14AWG MTW (WHERE APPLICABLE).
3. CT AND POWER WIRES ARE 10AWG MTW (WHERE APPLICABLE).
4. GROUNDING WIRES ARE 12AWG GREEN MTW (WHERE APPLICABLE).
5. SHORTING LINK TO BE REMOVED FROM SHORTING TYPE TB WHEN CURRENT XFMR IS TO BE USED.
6. ALL TERMINAL CONNECTIONS TO BE MADE WITH PRE–INSULATED RING TONGUE CRIMPED TYPE LUGS.
7. ALL DEVICES IN JB PROVIDED WITH PHENOLIC NAME PLATES WITH BLACK LETTERING ON WHITE BACKGROUND.
8. NO BUTT SPLICES ARE ALLOWED.
9. NEUTRAL WIRES ARE 10AWG WHITE MTW (WHERE APPLICABLE).
10. EXTERNAL HARDWARE TO BE 304 SSTL.

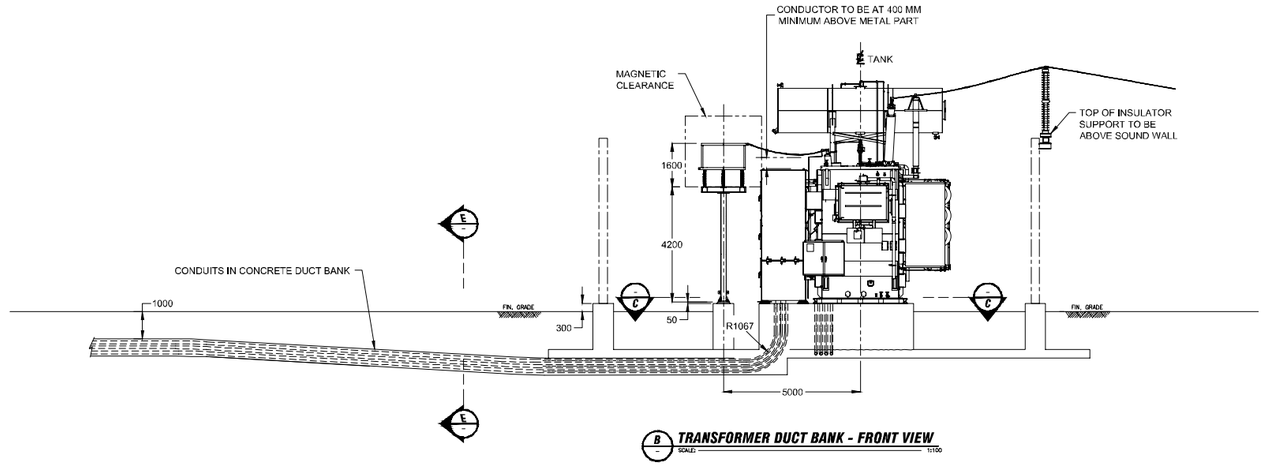
A - DUCT BANK ARRANGEMENT
SCALE: 1:100



B - TRANSFORMER DUCT BANK - FRONT VIEW
SCALE: 1:100

GENERAL NOTES :

1. ALL DIMENSIONS IN mm EXCEPT WHERE NOTED.
2. UNDERGROUND CONDUIT CSA 22.2 NO 211.1 (DB-2) OR BETTER. CONDUIT ABOVE GROUND TO BE CSA 22.2 NO 211.2 SCH 40.
3. FOR CONTROL CABLES IN CONDUIT TO BE INSTALLED EXCEEDING OESC AS NOTED BELOW, OTHERWISE AS PER CODE. THIS INCLUDES, BUT IS NOT LIMITED TO:
   - RESPECT THE MINIMUM COVER OF 750mm FOR VEHICULAR AREAS. ALL AREAS IN THE SUBSTATION ARE CONSIDERED VEHICULAR AREAS.
   - MINIMUM VERTICAL BEND RADIUS:
     2" (50mm) PVC - 9,5" (240mm)
     4" (100mm) PVC - 16" (406mm)
   - MINIMUM HORIZONTAL BEND RADIUS.
     ALL CONDUIT 36"(915mm)
   - THE MINIMUM COVER COULD BE REDUCED BY 150 mm IF MECHANICAL PROTECTION IS IN PLACE.
   - IF LOCATED IN ROCK, THE CONDUIT COULD BE SECURED IN THE ROCK IN A TRENCH NOT LESS THAN 150 mm DEEP AND GROUTED WITH CONCRETE TO THE LEVEL OF THE ROCK SURFACE.
   - APPROPRIATE MARKING TAPE SHALL BE INSTALLED AT MID-DEPTH OF CONDUITS OR CABLES . TYPICALLY A RED 6" WIDE MARKING TAPE WITH "DANGER" OR "BURIED CABLE" WRITTEN IN BLACK LETTERS.
   - A LAYER OF SAND SHOULD BE INSTALLED AT LEAST 75 mm DEEP BOTH ABOVE AND BELOW THE CONDUIT .
   - PLACE BACKFILL IN LAYERS OF 150mm OR LESS AND COMPACT TO A MINIMUM OF 95% PROCTOR DENSITY , SEE SECTION AND DETAIL FOR TYPE OF BACKFILL.
     *** *PAY PARTICULAR ATTENTION WHEN BACKFILL REQUIRED IS THAT OF LOW THERMAL RESISTANCE (RHO).* ***
4. FOR 35kV CABLES IN DUCT BANK TO BE INSTALLED AS PER OESC. THIS INCLUDES, BUT IS NOT LIMITED TO:
   - RESPECT THE MINIMUM COVER OF 1000mm FOR VEHICULAR AREAS. ALL AREAS IN THE SUBSTATION ARE CONSIDERED VEHICULAR AREAS.
   - MINIMUM HORIZONTAL AND VERTICAL BEND RADIUS: 42" (1067mm)
   - IF LOCATED IN ROCK, THE DUCT BANK COULD BE SECURED IN THE ROCK IN A TRENCH NOT LESS THAN 150 mm DEEP AND GROUTED WITH CONCRETE TO THE LEVEL OF THE ROCK SURFACE.
   - APPROPRIATE MARKING TAPE SHALL BE INSTALLED AT MID-DEPTH OF CONDUIT OR CABLES. TYPICALLY A RED 9" WIDE MARKING TAPE WITH "DANGER" OR "BURIED CABLE" WRITTEN IN BLACK LETTERS.
   - PLACE BACKFILL IN LAYERS OF 150mm OR LESS AND COMPACT TO A MINIMUM OF 95% PROCTOR DENSITY , SEE SECTION AND DETAIL FOR TYPE OF BACKFILL.
     *** *PAY PARTICULAR ATTENTION WHEN BACKFILL REQUIRED IS THAT OF LOW THERMAL RESISTANCE (RHO).* ***
5. MOLDED BELL END SHALL BE INSTALLED AT EACH CONDUIT EXIT.
6. SMALLER BENDING RADIUS COULD BE USED IF IN ACCORDANCE WITH OESC RULES. CABLES MINIMUM BENDING RADII AND ACCEPTABLE CABLE PULLING FORCES, CABLE PULLING FORCES MUST BE VALIDATED BY CONTRACTOR.
7. SEAL CONDUITS AFTER INSTALLATION IS COMPLETE WITH HILTI FIRE-BLOCKING FOAM CP-620 OR EQUIVALENT TO PREVENT WATER AND RODENT ENTRY.
8. SEE CIML DRAWING FOR TRENCHES INSTALLATION DETAIL AND DRAINAGE.
9. RESPECT CIRCUIT "A" AND "B" SEPARATION WHERE NOTED.
10. CABLES RUN FROM CONDUIT TO EQUIPMENT SHALL BE SUPPORTED EVERY METER MINIMUM. THE SUPPORT METHOD COULD BE:
    - ATTACHED TO SUPPORT STRUCTURE WITH STAINLESS STEEL STRAPS
    - FASTENED WITH GALVANIZED OR STAINLESS CABLE CLIPS BOLTED TO THE STRUCTURE.
    - ATTACHED TO A BUILT-ON-SITE STRUT FRAME OR INSTALLED IN A GALVANIZED TRAY FASTENED TO THE EQUIPMENT FRAME OR SUPPORT STRUCTURE.

DWG TITLE:

THE MAGNETIC FIELD OF THE REACTOR CAUSES THERMAL AND ELECTRODYNAMIC EFFECTS ON NEIGHBOURING METALLIC PARTS. THE RECOMMENDED MAGNETIC CLEARANCE CONTOUR (MC) IS SHOWN DASH–DOTTED IN THE DRAWING. FOR SMALL METALLIC PARTS DISTANCES ACCORDING TO MC1 HAVE TO BE OBSERVED. FOR METALLIC PARTS FORMING CLOSED LOOPS, SUCH AS GROUNDING WIRE, CONCRETE REBAR, ETC. DISTANCES ACCORDING TO MC2 HAVE TO BE OBSERVED. SPECIAL CARE MUST BE TAKEN FOR PLACEMENT OF SENSITIVE EQUIPMENT IN THE VICINITY OF THE REACTOR.

GREENHECK

AFJ-601X

Florida Product Approval No: FL6876.1, 15718
UL Classified: R25119

Florida Product Approved
Acoustical Louver

Application and Design

AFJ-601X is a **Florida Product Approved** stationary acoustical aluminum louver designed to protect air intake and exhaust openings in building exterior walls. AFJ-601X is tested in accordance with AMCA 500-L Air Performance and Water Penetration. AFJ-601X is tested in accordance with AMCA sound ratings program. AFJ-601X is tested in accordance with AMCA 540 Test Method for Louvers Impacted by Wind Borne Debris (Basic Protection, Missile Level D and Enhanced Protection, Missile Level E). **AFJ-601X is licensed to bear the AMCA seal allowing design professionals to select and apply with confidence.** AFJ-601X is tested and qualified per the following Florida test protocols: TAS 201 (Large Missile Impact), TAS 202 (Uniform Static Air Pressure) and TAS 203 (Cyclic Wind Loading). AFJ-601X is approved by Florida for use in Florida's High Velocity Hurricane Zone. AFJ-601X is qualified for wind loads up to 200 PSF *(size and configuration dependent, refer to the UL published certification for size and design load restrictions).*

LISTED
See www.AMCA.org for all certified or listed products

Standard Construction

Frame . . . . . .Heavy gauge formed aluminum, 6 in. x 0.080 in. nominal wall thickness

Blades. . . . . .J style acoustical, heavy gauge formed aluminum, 0.080 in. nominal wall thickness

Construction . . . .Mechanically fastened

Birdscreen. . . . . .3/4 in. x 0.051 in. flattened expanded aluminum in removable frame, inside mount (rear)

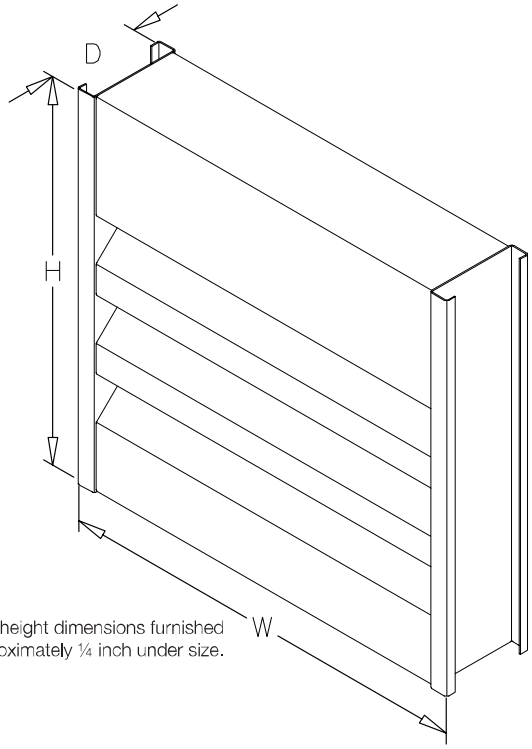
Acoustical Insulation . . . . . .Fiberglass insulation

Finish. . . . . .Mill

Angles . . . . . .Continuous, Ship Loose (mill finish)

Minimum Size . . .12 in. W x 15 in. H

Maximum Single Section Size . . . .60 in. W x 96 in. H



*Width and height dimensions furnished approximately ¼ inch under size.

Options *(at additional cost)*

- A variety of bird and insect screens
- Blank-off panel
- Extended sill
- Filter rack
- Flanged frame
- Security bars
- A variety of architectural finishes including:
  - Clear anodize
  - Integral color anodize
  - Baked enamel paint
  - Kynar paint

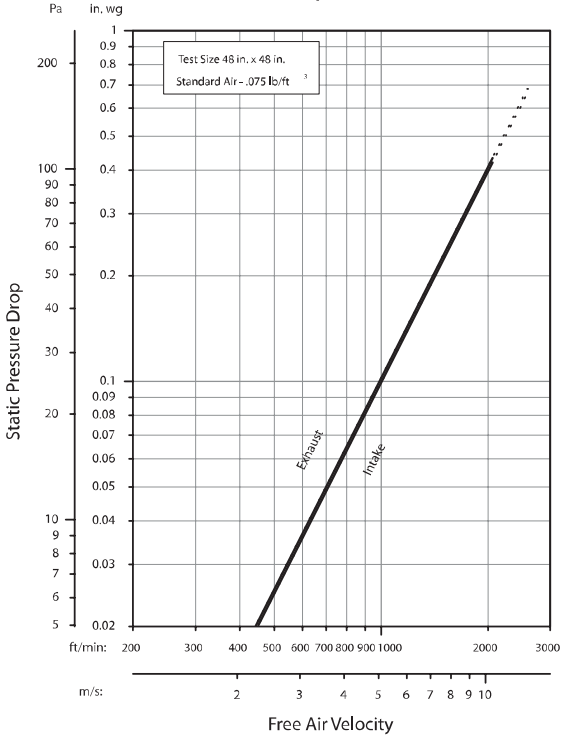
Airflow Resistance (Standard Air - .075 lb/ft³)



Model AFJ-601X resistance to airflow (pressure drop) varies depending on louver application (air intake or air exhaust). Free area velocities (shown) are higher than average velocity through the overall louver size. See louver selection information. (Test Figure 5.5-6.5)

Greenheck Fan Corporation certifies that the AFJ-601X louvers shown herein are licensed to bear the AMCA Seal. The ratings shown are based on tests and procedures performed in accordance with AMCA Publication 511 and comply with the requirements of the AMCA Certified Ratings Program. The AMCA Certified Ratings Seal applies to water penetration, air performance and sound ratings.

Greenheck Fan Corporation certifies that the AFJ-601X louvers shown herein are approved to bear the AMCA Listing Label. The Ratings shown are based on tests and procedures performaned in accordance with AMCA Publications and comply with the requirements of the AMCA Listing Label Program. The AMCA Listing Label applies to Wind Borne Debris Impact Resistant Resistant Louvers.

IMPACT RESISTANT LOUVER
Enhanced Protection
See www.AMCA.org for all certified or listed products

Sound Transmission Class

The Sound Transmission Class (STC) is a rating of the effectiveness of an assembly in isolating or reducing airborne sound transmission. STC is a single number that summarizes airborne sound transmission loss data. Assemblies with higher STC ratings are more efficient at reducing sound transmission. STC is determined in accordance with ASTM E413-04.

Transmission Loss

Transmission loss (TL) is a measurement of the reduction of sound power transmission (dB) through an assembly at a given frequency. The more sound power that is reduced, the greater the TL. TL is tested in accordance with ASTM E90-04.

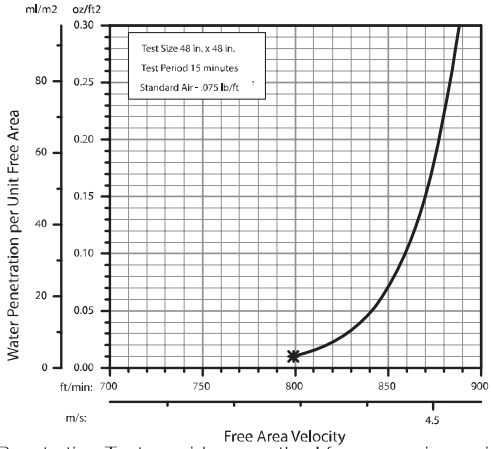
Free Field Noise Reduction in Decibels

Free Field Noise Reduction is determined by adding 6 dB to the Transmission Loss.

Octave Band	2	3	4	5	6	7	STC
Frequency (Hz)	125	250	500	1000	2000	4000	
Transmission Loss (dB)	4	4	6	10	17	12	10
Free Field Noise Reduction (dB)	10	10	12	16	23	18	

Water Penetration (Standard Air - .075 lb/ft³)

Test size 48 in. x 48 in. Test duration of 15 min.



The AMCA Water Penetration Test provides a method for comparing various louver models and designs as to their efficiency in resisting the penetration of rainfall under specific laboratory test conditions. The beginning point of water penetration is defined as that velocity where the water penetration curve projects through .01 oz. of water (penetration) per sq. ft. of louver free area. ***The beginning point of water penetration for Model AFJ-601X is 799 fpm free area velocity.** These performance ratings do not guarantee a louver to be weatherproof or stormproof and should be used in combination with other factors including good engineering judgement in selecting louvers.

INSTALLATION DETAILS

AFJ-601X

Florida Product Approval No.: FL6876.1, 15718
UL Classified: R25119

Maximum Size and Installation Information

Model AFJ-601X is a Florida Product Approved louver and must be installed in accordance with the installation instructions shown herein. Model AFJ-601X is qualified for installation within concrete/masonry, steel stud, structural steel or wood framed building conditions. Model AFJ-601X is structurally calculated to withstand positive and negative wind-loads up to 200 PSF. The louver section size will determine the actual maximum wind-load that the louver sections will withstand. The maximum single section width is 60 in. The maximum single section height is 96 in. While, the maximum opening height is limited to 96 in., the opening width may be unlimited as multiple sections may be installed side by side in accordance with installation instructions.

FINISHES

Finish Type	Description/Application	Color Selection	Standard Warranty (Aluminum)
2-coat 70% KYNAR 500®/HYLAR 5000® AAMA 2605 – Dry film thickness 1.2 mil. (AKA: Duranar®, Fluoropon®, Trinar®, Flouropolymer, Polyvinylidene Fluoride, PVDF2)	***"Best."*** The premier finish for extruded aluminum. Tough, long-lasting coating has superior color retention and abrasive properties. Resists chalking, fading, chemical abrasion and weathering.	**Standard Colors:** Any of the 24 standard colors shown can be furnished in 70% or 50% KYNAR 500®/HYLAR 5000® or Baked Enamel. **2-Coat Mica:** Greenheck offers 9 standard 2-coat Mica colors. Other colors are available. Consult Greenheck for possible extra cost when selecting non-standard colors or special finishes.	10 Years (Consult Greenheck for availability of extended warranty)
2-coat 50% KYNAR 500®/HYLAR 5000® AAMA 2604 – Dry film thickness 1.2 mil. (AKA: Acroflur®, Acrynar®)	***"Better."*** Tough, long-lasting coating has excellent color retention and abrasive properties. Resists chalking, fading, chemical abrasion and weathering.		5 Years
Baked Enamel AAMA 2603 – Dry film thickness 0.8 mil. (AKA: Acrabond Plus®, Duracron®)	***"Good."*** Provides good adhesion and resistance to weathering, corrosion and chemical stain.		1 Year
Integral Color Anodize AA-M10C22A42 (>0.7 mil)	"Two-step" anodizing is produced by following the normal anodizing step with a second, colorfast process.	Light, Medium or Dark Bronze; Champagne; Black	5 years
Clear Anodize 215 R-1 AA-M10C22A41 (>0.7 mil)	Clear, colorless and hard oxide aluminum coating that resists weathering and chemical attack.	Clear	5 years
Clear Anodize 204 R-1 AA-M10C22A31 (0.4-0.7 mil)	Clear, colorless and hard oxide aluminum coating that resists weathering and chemical attack.	Clear	1 Year
Industrial coatings	Greenheck offers a number of industrial coatings such as Hi-Pro Polyester, Epoxy, and Permatector®. Consult a Greenheck Product Specialist for complete color and application information.		Consult Greenheck
Mill	Materials may be supplied in natural aluminum or galvanized steel finish when normal weathering is acceptable and there is no concern for color or color change.		n/a

Finishes meet or exceed AAMA 2605, AAMA 2604, and AAMA 2603 requirements. Please consult www.greenheck.com for complete information on standard and extended paint warranties. Paint finish warranties are not applicable to steel products.

SOUND POWER MEASUREMENTS AND DETERMINATION OF FREE-FIELD SOUND PRESSURE LEVEL OF A DSTATCOM

Prepared for:

S&C Electric Canada Ltd.
90 Belfield Road
Toronto, ON
M9W 1G4

October 21, 2013

1 INTRODUCTION

HGC Engineering was retained by S&C Electric Canada to determine the sound power levels and free-field sound pressure levels generated by typical operation of a DSTATCOM, part number PEA-1415-12 (SN 0162). This particular DSTATCOM includes eight inverters and four transformers. The sound power levels of the inverter and transformers were measured on September 25, 2013, at the Cape Scott Wind Farm, in accordance with ISO Standard 9614-2, "Acoustics – Determination of sound power levels of sources using sound intensity – Part 2: Measurement by scanning." The free-field sound pressure levels were then derived from the measured sound power according to ISO Standard 11203, "Acoustics – Noise emitted by machinery and equipment – Determination of sound pressure levels at a work station and at other specified positions from the sound power level."

2 SOUND SOURCES UNDER TEST

The PureWave DSTATCOM Distributed Static Compensator was located within the transformer station at the Cape Scott Wind Farm Project. The DSTATCOM was manufactured by S&C Electric Company in March of 2013. The unit is nominally rated at 10 mVA with an output voltage of 480 V. The particular unit under test included eight 1250 kW inverters and four 2.5 mVA transformers. Overall dimensions are approximately 9.2 metres wide, 14.1 metres in length and 2.9 metres in height. Photos of the DSTATCOM are provided in figures 1 and 2.

The unit is packaged in a steel ISO style shipping container. Interior surfaces within the unit were acoustically reflective (sheet steel). The interior lining of the air intake hoods contained 25 mm of

porous foam. The inverter enclosure and each transformer were located on concrete pads with the surrounding ground cover consisting of gravel.

Acoustically, the DSTATCOM was tonal. A tonal sound is defined as one which has a "pronounced audible tonal quality such as a whine, screech, buzz or hum". A/C transformers and inverters typically exhibit a humming character at twice the line frequency (120 Hz) and harmonics thereof, as a result of magnetostrictive forces in the windings and semiconductors. The sound level measurements indicate tones at 120 Hz and harmonics thereof, but also at 4560 Hz with harmonics at 120 Hz increments. The DSTATCOM exhibits pure-tone characteristics, which should be taken into consideration during environmental noise impact assessments, according to the guidelines appropriate to the jurisdiction of the site where the DSTATCOM package will be situated. In Ontario, for instance, an additional penalty of 5 dBA should be added to the stated sound power level, according to guidelines of the Ministry of the Environment.

The unit was operated at 100% of capacity for the duration of the measurements.

3 ACOUSTIC ENVIRONMENT

The measurements were conducted outdoors at the Cape Scott Wind Farm Project in British Columbia. The sound from the DSTATCOM was steady, such that sound intensity methods could be used to determine the sound power emission levels of the DSTATCOM assembly, according to ISO Standard 9614-2. The air intakes and exhaust hoods on the inverter enclosure had minimal air flow.

Weather conditions during the test period remained relatively constant with a mainly clear sky, air temperature of 12° Celsius, and light winds from the northwest. The measurements were paused during higher wind gusts.

4 INSTRUMENTATION

The sound power measurements were conducted using a Brüel & Kjær PULSE model 3560-B-010 Real Time Frequency Analyzer (S/N 2516092) equipped with a Brüel & Kjær model ZH 0632 Sound Intensity Probe and a Brüel & Kjær matched intensity microphone pair. The instrumentation was calibrated before and after the measurements using a Brüel & Kjær model 4231 sound level calibrator with a dual microphone coupler. Laboratory calibration certificates for the equipment are included as Appendix A. The pressure-residual intensity index, L_{PRI}, for the intensity measurement system was calibrated prior to the measurements using a G.R.A.S. cavity calibrator, model 51AB, the results of which are included in Appendix B (listed as "Ld" with the appropriate bias error factor included).

5 MEASUREMENT PROCEDURE

A sketch of the measurement setup is appended as Figure 3. Two five-sided rectangular measurement surfaces were used (four vertical sides plus top), with outer dimensions of 14.15 m x 4.6 m x 3.1 m tall for the inverter enclosure and 12.15 m x 2.9 m x 2.4 m tall for the transformers, corresponding to approximately 0.2 metres from the inverters and transformers surfaces.

A 12 mm microphone spacer was used for frequencies greater than 500 Hz and a 50 mm spacer for frequency bands in the range of 63 to 500 Hz. Each scan was repeated orthogonally, as required by the ISO 9614-2 standard.

6 MEASUREMENT RESULTS

Octave Band Results

Table I provides the combined octave band sound power levels for the transformers and inverters, part of the DSTATCOM, as determined according to ISO 9614-2.

Table I: DSTATCOM (10 mVA) Sound Power Level [dB re 10^{-12} Watt]

Octave Band Centre Frequency [Hz]	63	125	250	500	1k	2k	4k	8k	Overall [dBA]
Sound Power Level [dB]	88	106	90	86	75	69	79	69	91

Appendix B contains the detailed octave band sound power level results, including the data quality indices stipulated in the ISO 9614-2 standard (F_{pI}, $F_{+/-}$), and the resulting accuracy grade. "Engineering Grade" accuracy was achieved for the overall A-weighted sound level and for most octave bands.

The conversion from sound power to free-field sound pressure in ISO Standard 11203 is based on the area of the imaginary surface enclosing the source, at the specified reference distance from the equipment. In this case, the pressure has been calculated at 7 metres from the surfaces of the DSTATCOM (corresponding to an enveloping area of 770 m^2 for the inverters and 600 m^2 for the transformers).

The combined octave band results are presented in Table II below and are also shown graphically in Figure 4.

Table II: Free-field Sound Pressure Level at 7 metres [dB re 20 µPa] Derived from Measured Sound Power Level

Octave Band Centre Frequency [Hz]	**63**	**125**	**250**	**500**	**1k**	**2k**	**4k**	**8k**	**Overall [dBA]**
Sound Pressure Level [dB]	60	77	61	57	46	40	50	40	63

7 MEASUREMENT ACCURACY

ISO Standard 9614-2 provides certainty limits for measurement results having Engineering Grade or Survey Grade accuracy, as listed in Table III below.

Table III: Uncertainty –Standard Deviation [dB]

Frequency Range [Hz]	Engineering Grade Accuracy	Survey Grade Accuracy
50 to 160	3.0	
200 to 315	2.0	
400 to 5000	1.5	
6300	2.5	
Overall [dBA]	1.5	4

SOUND POWER MEASUREMENTS AND DETERMINATION OF FREE-FIELD SOUND PRESSURE LEVEL OF 800 KVA ELECTRICAL TRANSFORMER

Prepared for:

Canadian Solar Solutions Inc.
545 Speedvale Avenue West
Guelph, Ontario
N1K 1E6

April 9, 2015

1 INTRODUCTION & SUMMARY

HGC Engineering was retained by Canadian Solar Solutions Inc. to determine the sound power level of an 800 kVA transformer installed as part of an inverter assembly at the Canadian Solar site in Demorestville, Ontario. The measurements of the transformer were conducted on March 31, 2015.

Two different measurement methods were employed to determine the sound power levels of this transformer installation. The most widely used method in the industry for measuring sound from electrical transformers is the IEEE Standard, C57.12.90 [1]. Because the IEEE method utilizes sound pressure measurements, it is susceptible to interfering background sound. At the Demorestville site, extraneous sound from the adjacent power inverter unit was found to adversely influence the IEEE test results. Therefore, a second set of tests was conducted, according to ISO Standard 9614-2. Unlike the IEEE method, ISO 9614-2 utilizes sound intensity measurements, which provide the best possible immunity to interfering noise from nearby sources.

The IEEE test results are presented herein, for information purposes only, but significantly overstate the true sound power of the transformer. The overall A-weighted sound power level of the transformer, determined using the ISO 9614-2 Standard, is 55 dBA.

2 SOUND SOURCES UNDER TEST

The unit under test was an 800 kVA electrical transformer manufactured by Cooper Power Systems (model 27600 DELTA-360Y/208, serial No. CP1350007913).

The transformer was located on an elevated concrete pad, approximately 0.4 m above local grade, immediately adjacent to an electrical inverter enclosure. Pictures of the transformer and inverter assembly are included as Figures 1a and 1b.

3 ACOUSTIC ENVIRONMENT

Canadian Solar personnel on-site confirmed that both the subject transformer and the inverter unit were operating at maximum capacity during the test, as typical during sunny conditions.

During the test, high frequency sound in the 2 and 4 kHz frequency bands was emitted from a ventilation outlet of the nearby inverter enclosure and through the walls of the enclosure itself, and was clearly contributing to the sound levels measured in the vicinity of the transformer.

Weather conditions during the test period were sunny, with air temperature of 5° Celsius, and minimal winds.

4 INSTRUMENTATION

All instrumentation was within its annual laboratory calibration period (certificates in Appendix A) and correct calibration was verified before and after the measurements using a Brüel & Kjær model 4231 sound level calibrator.

For the C57.12.90 test, the sound level measurements were conducted using a Larson Davis Sound Level Meter, Model 831 (SN 0001865).

The ISO 9614-2 test was conducted using a Brüel & Kjær PULSE model 3560-B-010 Real Time Frequency Analyzer (S/N 2476771) equipped with a Brüel & Kjær model ZH 0632 Sound Intensity Probe and a Brüel & Kjær phase-matched intensity microphone pair. The pressure-residual intensity index, L_{PRI}, for the intensity measurement system was calibrated prior to the measurements using a G.R.A.S. cavity calibrator, model 51AB.

5 C57.12.90: MEASUREMENT METHOD & RESULTS

As per the IEEE C57.12.90 standard, measurements were conducted at half the height of the transformer at approximately 0.9 metre intervals around all four sides of the unit. Measurements were conducted at 8 unique locations around the transformer perimeter at 0.3 meters away from the transformer surfaces.

The conversion from sound pressure level to sound power level was based on the area of the imaginary surface enclosing the source, over which the measurements were conducted. In this case, the enclosing surface area at 0.3 metres from the transformer was 22 m^2, including the top surface.

Table I below provides the sound power level of the transformer determined from the measurements according to IEEE Standard C57.12.90.

Table I: Test Results According to C57.12.90

Octave Band Centre Frequency [Hz]	**63**	**125**	**250**	**500**	**1k**	**2k**	**4k**	**8k**	**Overall [dBA]**
Sound Power Level [dB re: 10^{-12} Watt]	64*	74*	60*	61*	49*	54*	58*	53*	64*

*Overestimate of sound power level, caused by sound from inverter

Appendix B contains the detailed measured one-third octave band sound levels used to calculate the sound power level in Table I.

Since measurement results according to C57.12.90 include contributions of extraneous sounds from the adjacent inverter enclosure, the values in Table I overestimate the true sound power levels of the transformer.

The IEEE Standard C57.12.90 does not provide accuracy grade ratings or uncertainty bounds for its measurement results.

6 ISO 9614-2: MEASUREMENT METHOD & RESULTS

In order to determine the transformer sound power level in accordance with methods of ISO Standard 9614-2, a five-sided rectangular measurement surface was defined (four vertical sides plus top) around the transformer, with side dimensions of 1.8 m x 1.7 m and height of 1.7 m. Sound intensity measurements were conducted over each measurement sub-surface, using a 12 mm microphone spacer for frequencies greater than 500 Hz and a 50 mm spacer for frequency bands in the range of 63 to 500 Hz. Each scan was repeated orthogonally, as required by the ISO 9614-2 standard.

Table II, below, provides the resulting octave band linear-weighted and overall A-weighted sound power levels of the subject 800 kVA transformer.

Table II: Test Results According to ISO 9614-2

Octave Band Centre Frequency [Hz]	**63**	**125**	**250**	**500**	**1k**	**2k**	**4k**	**8k**	**Overall [dBA]**
Sound Power Level [dB re: 10^{-12} Watt]	52	66	56	54	38	--	47	32	55
Grade of Accuracy	S	E	S	S	S	--	E	--	--

E = Engineering Grade; S = Survey Grade

ISO Standard 9614-2 provides certainty limits for measurement results having Engineering Grade or Survey Grade accuracy, as listed in Table III below.

Table III: Uncertainty –Standard Deviation [dB]

Frequency Range [Hz]	**Engineering Grade Accuracy**	**Survey Grade Accuracy**
50 to 160	3.0	
200 to 315	2.0	
400 to 5000	1.5	
6300	2.5	
Overall [dBA]	1.5	4

Engineering Grade accuracy, according to ISO 9614-2, was achieved in the 125 Hz and 4 kHz octave frequency bands; Survey Grade accuracy was achieved in the 63 Hz, 250 Hz, 500 Hz, and 1 kHz octave frequency bands.

Sound power level in the 8 kHz frequency bands did not satisfy the Survey Grade criteria due to interfering sound from the inverter. However, since the value in this band is sufficiently less than the dominant frequency bands, it does not contribute materially to the overall A-weighted sound power level, or influence its accuracy rating.

Since no quantitative level was measurable in the 2 kHz octave frequency band due to interference from the inverter enclosure, it is not possible to assign an accuracy grade to the overall A-weighted result.

The detailed results of the test, including the data quality indices stipulated in the standard, as well as the resulting accuracy grade, are summarized in Appendix C.

SOUND POWER MEASUREMENTS OF 1600 KVA ELECTRICAL TRANSFORMER ACCORDING TO ISO 9614-2

Prepared for:

Canadian Solar Solutions Inc.
545 Speedvale Avenue West
Guelph, Ontario
N1K 1E6

April 24, 2015

1 INTRODUCTION & SUMMARY

HGC Engineering was retained by Canadian Solar Solutions Inc. to determine the sound power level of a 1600 kVA transformer installed as part of an inverter assembly at the GoldLight Solar site at 7130 Old Homestead Road, Ontario. The measurements of the transformer were conducted on April 15, 2015.

The methods in ISO Standard ISO 9614-2[1] were used to determine the transformer sound power level using sound intensity instrumentation, which provide the best possible immunity to interfering noise from nearby sources and background sound.

The results and details of the measurements are included in the body of the report.

2 SOUND SOURCES UNDER TEST

The unit under test was a 1600 kVA electrical transformer manufactured by Cooper Power Systems (catalogue No. 0001EA65X7TA, serial No. CP1459001760). The transformer was located on an elevated concrete pad, approximately 0.4 m above local grade, immediately adjacent to an electrical inverter enclosure. Pictures of the transformer and inverter assembly are included as Figures 1a and 1b.

[1] ISO 9614-2, "Acoustics – Determination of sound power levels of sources using sound intensity – Part 2: Measurement by scanning", International Organization for Standardization, Switzerland, 1996.

3 ACOUSTIC ENVIRONMENT

The transformer was energized during the measurements, as confirmed at the outset of the test by Canadian Solar personnel. In order to minimize the interference from two inverter exhausts, which are part of the adjacent inverter installation, the inverters associated with the transformer were deactivated by Canadian Solar personnel immediately before the test.

During the test, sound emissions from the transformer were observed to vary cyclically in intervals of approximately two minutes; the sound emissions exhibited tonal character, with a dominant tone to be audible in the 125 Hz octave band.

Weather conditions during the test period were sunny, with air temperature of 10° Celsius, and a northeast wind from 5 to 10 km/hr.

4 INSTRUMENTATION

All instrumentation was within its annual laboratory calibration period (certificates in Appendix A) and correct calibration was verified before and after the measurements using a Brüel & Kjær model 4231 sound level calibrator.

The test was conducted using a Brüel & Kjær PULSE model 3560-B-010 Real Time Frequency Analyzer (S/N 2476771) equipped with a Brüel & Kjær model ZH 0632 Sound Intensity Probe and a Brüel & Kjær phase-matched intensity microphone pair. The pressure-residual intensity index, L_{PRI}, for the intensity measurement system was calibrated prior to the measurements using a G.R.A.S. cavity calibrator, model 51AB.

5 MEASUREMENT PROCEDURE

In accordance with methods of ISO Standard 9614-2, a five-sided rectangular measurement surface was defined (four vertical sides plus top) around the transformer, with side dimensions of 1.8 m x 2.2 m and height of 1.95 m. Sound intensity measurements were conducted over each measurement sub-surface, using a 12 mm microphone spacer for frequencies greater than 500 Hz and a 50 mm spacer for frequency bands in the range of 50 to 500 Hz. Each scan was repeated orthogonally, as required by the ISO 9614-2 standard with a scanning speed of approximately 0.5 m/s. A sketch of the measurement setup is appended as Figure 2.

6 RESULTS

Table I, below, provides the resulting octave band linear-weighted and overall A-weighted sound power levels of the subject 1600 kVA transformer.

Table I: Test Results According to ISO 9614-2

Octave Band Centre Frequency [Hz]	**63**	**125**	**250**	**500**	**1k**	**2k**	**4k**	**8k**	**Overall [dBA]**
Sound Power Level [dB re: 10^{-12} Watt]	--	51	49	47	45	38	45	--	51

Note: The transformer produced minimal sound emissions in the 63 Hz and 8 kHz octave bands. The measured sound levels in these bands were at least 10 dB below the values in the remaining frequency bands, and were thus excluded from the determination of the transformer sound power level, as stipulated by the ISO standard.

The measurements yielded results in the range from 125 Hz to 4 kHz, and achieved "Survey Grade" accuracy according to ISO 9614-2.

ISO Standard 9614-2 provides certainty limits for measurement results having Engineering Grade or Survey Grade accuracy, as listed in Table II below.

Table II: Uncertainty –Standard Deviation [dB]

Frequency Range [Hz]	**Engineering Grade Accuracy**	**Survey Grade Accuracy**
50 to 160	3.0	
200 to 315	2.0	
400 to 5000	1.5	
6300	2.5	
Overall [dBA]	1.5	4

The detailed results of the test, including the data quality indices stipulated in the standard, are summarized in Appendix B.

CERTIFICATE of CALIBRATION

Make :	Bruel & Kjaer	Reference # :	137986
Model :	3560-B-010	Customer :	HGC Engineering Mississauga, ON
Descr. :	Measuring System 5 ch		
Serial # :	2476771	P. Order :	Sean Richardson
Asset # :	NAN		

Cal. status : Received in spec's, no adjustment made.

Navair Technologies certifies that the above listed instrument was calibrated on date noted and was released from this laboratory performing in accordance with the specifications set forth by the manufacturer.

Unless otherwise noted in the calibration report a 4:1 accuracy ratio was maintained for this calibration.

Our calibration system complies with the requirements of ISO-17025 standard, working standards used for calibration are certified by or traceable to the National Research Council of Canada or the National Institute of Standards and Technology.

Calibrated : Jan 09, 2015 By : J. Raposo

Cal. Due : Jan 09, 2016

Temperature : 23 °C ± 2 °C Relative Humidity : 30% to 70%

Standards used : J-129 J-215 J-303

Subject:	Max Sound Power	Page:	Page 1 of 1

Dear Sir,

The maximum sound power per coil for the reactors supplied under 415100604-10 is 80 dBA when energized to 167.3A at 60hZ.

Sincerely,

Eric Chan
